THE COMMISSION OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Economic Community,

Having regard to Council Regulation (EEC) No 1445/72 of 24 April 1972 on the Nomenclature of Goods for the External Trade Statistics of the Community and Statistics of Trade between Member States (Nimexe) [1], as amended by Regulation (EEC) No 3065/75 [2], and in particular Article 5 thereof,

Whereas the Annex to the abovementioned Regulation has already been amended since 1972; whereas it was last amended by Commission Regulation (EEC) No 3218/75 [3]; whereas further amendments are necessary;

Whereas Council Regulation (EEC) No 950/68 of 28 June 1968 on the Common Customs Tariff [4], has been amended by Council Regulation (EEC) No 2723/76 of 8 November 1976 [5]; whereas it is necessary, in order to maintain the correlation between the nomenclature of the Common Customs Tariff and that of Nimexe, to amend the latter;

Whereas it is necessary to adapt the statistical breakdown of certain tariff headings or subheadings in Nimexe to keep in line with developments in commerce;

Whereas, moreover, the correlation with the nomenclature of the Common Customs Tariff as well the changes needed to keep in line with developments in commerce can only be effected in a consistent fashion by certain changes to the text;

Whereas Council Regulation (EEC) No 1736/75 of 24 June 1975 on the external trade statistics of the Community and statistics of trade between Member States [6], and in particular Article 36 thereof, requires the Commission to publish the version of Nimexe valid on 1 January each year;

PRELIMINARY PROVISIONS

1. The Nimexe headings correspond either to headings of the nomenclature for the classification of goods in customs tariffs (Customs Cooperation Council Nomenclature or CCCN) [1] or subheadings of the Common Customs Tariff nomenclature (CCT), in so far as these have not been grouped together or replaced by statistical subdivisions, or to statistical subdivisions of headings of the CCCN or of subheadings of the nomenclature of the CCT. In addition, certain items which do not so correspond have been introduced for specific purposes (for example, goods carried by post, goods declared as ships' stores, etc.).

The application of some of the Nimexe headings which correspond to statistical subdivis ions or have been introduced for specific purposes is optional.

2. Each Nimexe heading comprises a code number, a text and, where appropriate, a supplementary unit. However, the optional Nimexe headings have no code numbers.

3. The code is made up of six digits; of these, the first four are those of the CCCN headings (for some of these, such as headings 27.05 *bis* and 73.15, the numbering has had to be modified for technical reasons) and the last two identify the Nimexe items.

4. Nimexe incorporates alphanumeric references to the nomenclature of the CCT.

5. Each Nimexe item is accompanied by the 5-digit code number of the relevant item in the CST—i.e. the Statistical and Tariff Classification for international Trade, which is the version of the Standard International Trade Classification, Revised, used in the Community.

6. The interpretation of Nimexe, to the level of the CCT subheadings, is governed by General Rules A and C of the CCT. By analogy, these rules also apply to the statistical subdivisions.

7. Amendments to Nimexe enter into force only on 1 January of each year.

CHAPTER 10

CEREALS

Note

Headings in this Chapter, except heading No 10.06, are to be taken not to apply to grains which have been ground to remove the husk or pericarp or otherwise worked. Heading No 10.06 is to be taken to apply to unworked rice and also rice, husked, glazed, polished or broken, but not otherwise worked.

Additional Notes

1. *The term "durum wheat", as used in subheading 10.01 B, shall be taken to mean wheat of the "triticum durum" species and the hybrids derived from the interspecific crossing of "triticum durum" with the same number of chromosomes as that species. Durum wheat thus defined must be of a colour ranging from amber-yellow to brown and show a translucent horn-like vitreous fracture.*

2. *The following terms shall have the meanings hereunder assigned to them:*
   - *(a) "Round grain rice" (10.06 A I a), A II a), B I a) and B II a)): rice, the grains of which are of a length not exceeding 5·2 mm and of a length/width ratio of less than 2;*
   - *(b) "Long grain rice" (10.06 A I b), A II b), B I b) and B II b)): rice, the grains of which are of a length exceeding 5·2 mm;*
   - *(c) "Paddy rice" (10.06 A I): rice which has retained its husk after threshing;*
   - *(d) "Husked rice" (10.06 A II): paddy rice from which only the husk has been removed. Examples of rice falling within this definition are those with the commercial descriptions "brown rice", "cargo rice", "loonzain" and "riso sbramato";*
   - *(e) "Semi-milled rice" (10.06 B I): paddy rice from which the husk, part of the germ, and the whole or part of the outer layers of the pericarp, but not the inner layers, have been removed;*
   - *(f) "Wholly milled rice" (10.06 B II): rice from which the husk, the whole of the outer and inner layers of the pericarp, the whole of the germ in the case of long or semi-long grain rice, and at least part thereof in the case of round grain rice, have been removed, but in which longitudinal white striations may remain on not more than 10% of the grains;*
   - *(g) "Broken rice" (10.06 C): grain fragments the length of which does not exceed three quarters of the average length of the whole grain.*

3. *Levies applicable to mixtures of cereals:*

   A. *The levy applicable to mixtures composed of two of the cereals falling within headings Nos 10.01 to 10.05 and 10.07 shall be that applicable:*
      - *(a) to the component cereal predominating by weight, when that cereal represents at least 90% of the weight of the mixture;*
      - *(b) to the component cereal liable to the higher levy, when neither of the two component cereals represent at least 90% of the weight of the mixture.*

   B. *Where a mixture is composed of more than two of the cereals falling within headings Nos 10.01 to 10.05 and 10.07, and where several cereals each represent more than 10% of the weight of the mixture, the levy applicable to the mixture shall be the highest of the levies applicable to such cereals, even when the amount of the levy is the same for two or more cereals. Where a single cereal represents more than 10% of the weight of the mixture, the levy to be applied shall be that applicable to such cereal.*

   C. *The levy applicable to mixtures composed of the cereals falling within headings Nos 10.01 to 10.05 and 10.07 and not governed by the above rules shall be the higher or highest of the levies applicable to the cereals composing the mixture concerned, even when the amount of the levy is the same for two or more of the cereals.*

   D. *The levy applicable to mixtures composed of one or more of the cereals falling within headings Nos 10.01 to 10.05 and 10.07 and of one or more of the products falling within heading No 10.06 shall be that applicable to the component cereal or product liable to the higher or highest levy.*

10.01

E. The levy applicable to mixtures composed of rice of heading No 10.06 classifiable under several different processing groups or stages, or of rice classifiable under one or more different processing groups or stages and of broken rice, shall be that applicable:

(a) to the component predominating by weight, when that component represents at least 90% of the weight of the mixture;

(b) to the component liable to the higher or highest levy, when no component represents at least 90% of the weight of the mixture.

F. Where this method of assessing the levy cannot be applied, the levy to be applied to such mixtures shall be that determined by the tariff classification of the mixtures.

CHAPTER 11

PRODUCTS OF THE MILLING INDUSTRY; MALT AND STARCHES; GLUTEN; INULIN

Notes

1. This Chapter does not cover:
   (a) Roasted malt put up as coffee substitutes (heading No 09.01 or 21.01);
   (b) Flours and meal prepared for use as infant food or for dietetic or culinary purposes of heading No 19.02;
   (c) Corn flakes and other products falling within heading No 19.05;
   (d) Pharmaceutical products (Chapter 30); or
   (e) Starches having the character of perfumery, cosmetics or toilet preparations falling within heading No 33.06.

2. A. Products from the milling of the cereals listed in the table below fall within this Chapter if they have, by weight on the dry product:
   (a) a starch content (determined by the modified Ewers polarimetric method) exceeding that indicated in Column (2); and
   (b) an ash content (after deduction of any added minerals) not exceeding that indicated in Column (3).
   Otherwise, they fall to be classified in heading No 23.02.
   However, germ of cereals, whole, rolled, flaked or ground, falls in all cases within heading No 11.02.

   B. Products falling within this Chapter under the above provisions shall be classified in heading No 11.01 (cereal flours) if the percentage passing through a silk gauze or man-made textile sieve with the aperture indicated in Column (4) or (5) is not less, by weight, than that shown against the cereal concerned.
   Otherwise, they fall to be classified in heading No 11.02.

Cereal	Starch content	Ash content	Rate of passage through a sieve with an aperture of	
			315 micrometres	500 micrometres
(1)	(2)	(3)	(4)	(5)
Wheat and rye	45%	2·5%	80%	—
Barley	45%	3%	80%	—
Oats	45%	5%	80%	—
Maize and sorghum	45%	2%	—	90%
Rice	45%	1·6%	80%	—
Buckwheat	45%	4%	80%	—
Other cereals	45%	2%	50%	—

Additional Notes

1. *For the purposes of subheading 11.02 A, the expression "cereal groats and cereal meal" means products obtained by the fragmentation of cereal grains, of which:*
   (a) in the case of maize products, at least 95% by weight passes through a silk gauze or man-made textile sieve with an aperture of 2 mm;
   (b) in the case of other cereal products, at least 95% by weight passes through a silk gauze or man-made textile sieve with an aperture of 1·25 mm.

11.01

2. *Products from the milling of the cereals of this Chapter which have been pelletised either directly by compression or by the addition of a binder in a proportion of up to 3% by weight, are to be classified in subheading 11.02 F.*

CHAPTER 15

ANIMAL AND VEGETABLE FATS AND OILS AND THEIR CLEAVAGE PRODUCTS; PREPARED EDIBLE FATS; ANIMAL AND VEGETABLE WAXES

Notes

1. This Chapter does not cover:
   (a) Pig fat or poultry fat of heading No 02.05;
   (b) Cocoa butter (fat or oil) (heading No 18.04);
   (c) Greaves (heading No 23.01) and residues of heading No 23.04;
   (d) Fatty acids in an isolated state, prepared waxes, medicaments, paints, varnishes, soap, perfumery, cosmetics or toilet preparations, sulphonated oils or other goods falling within any heading in Section VI; or
   (e) Factice derived from oils (heading No 40.02).

2. Soapstocks, oil foots and dregs, stearin, wool grease and glycerol residues are to be taken as falling within heading No 15.17.

Additional Notes

1. *For the purposes of heading No 15.07:*

   A. *Fixed vegetable oils, fluid or solid, obtained by pressure, shall be considered as "crude" if they have undergone no other processing than:*
      — *decantation within the normal time limits;*
      — *centrifugation or filtration, provided that, in order to separate the oils from their solid constituents, only mechanical force, such as gravity or pressure of centrifugal force, has been employed (excluding any absorption filtering process or any other physical or chemical process);*

   B. *Fixed vegetable oils, fluid or solid, obtained by extraction shall continue to be considered as "crude" when they cannot be distinguished, by their colour, odour or taste, nor by recognised special analytical properties, from vegetable oils and fats obtained by pressure;*

   C. *The expression "crude oils" shall be taken to extend to de-gummed soya bean oil and to cotton seed oil from which the gossypol has been removed.*

2. A. *For the purposes of subheading 15.07 A, "olive oil" means oil derived solely from the treatment of olives, excluding re-esterified olive oil and mixtures of olive oil with other oils;*

   B. *Subheading 15.07 A I a), covers olive oil obtained by refining virgin olive oil, whether or not blended with virgin olive oil, and having the following characteristics:*

      (a) a free fatty acid content, expressed as oleic acid, not exceeding 3%;

      (b) a K_{270} extinction coefficient (absorption under a thickness of 1 cm of a solution of 1 g of oil per 100 ml in iso-octane (2,2,4-trimethylpentane) at a wavelength of 270 nm), higher than 0·25 but not higher than 1·10 and, after treatment of the sample of oil with activated alumina, higher than 0·11;

      (c) an extinction coefficient variation, in the 270 range, higher than 0·01 but not higher than 0·16.

This variation is defined by:

$\Delta K = K_m - 0{\cdot}5\ (K_{m-4} + K_{m+4})$, *where*

K_m *is the extinction coefficient at the wavelength of the maximum of the absorption curve in the 270 nm range and*

K_{m-4} *and* K_{m+4} *are the extinction coefficients at wavelengths 4 nm lower and higher, respectively, than that of* K_m *;*

(d) no positive reaction of oils from olive residues ;

C. Subheading 15.07 A I b) covers olive oil having:

(a) the characteristics mentioned in paragraphs 2 B (a) to (c) and a positive reaction of oils from olive residues ; or

(b) the characteristics mentioned in paragraph 2 B (a) and a K_{270} *extinction coefficient higher than 1·10 but not higher than 2·0, and an extinction coefficient variation in the 270 nm range not higher than 0·20 ;*

● *D. For the purposes of subheadings 15.07 A I a) and 15.07 A II a), "virgin olive oil" means natural olive oil obtained exclusively by mechanical processes, including pressure, apart from mixtures with olive oil obtained otherwise, and having the following characteristics:*

(a) a K_{270} *extinction coefficient, after treatment of the sample of oil on activated alumina, not higher than 0·11 ; in exceptional cases certain oils of high acidity, after being passed over activated alumina, may have a* K_{270} *extinction coefficient higher than 0·11. In such cases, after neutralization and decolourization in the laboratory, they must have the characteristics of the oils falling within subheading 15.07 A I a) of the Common Customs Tariff ;*

(b) an extinction coefficient variation, in the 270 nm range, not higher than 0·01 ;

(c) no positive reaction of oils from olive residues.

3. Subheading 15.17 A does not cover:

(a) residues resulting from the treatment of fatty substances containing oil having an iodine index, determined by the Wijs method, without catalyst, lower than 70 or higher than 100 ;

(b) residues resulting from the treatment of fatty substances containing oil having an iodine index not lower than 70 nor higher than 100, of which the peak area representing the retention volume of β-sitosterol, determined in accordance with the provisions in Annex II to the Regulations mentioned in Additional Note 4 below, is less than 93% of the total sterol peak areas.

4. The analytical methods to be used for determining the characteristics of the products mentioned above are those specified in Annexes I and II to Regulation (EEC) No 618/72.

   (c) "total alcoholic strength" means the sum of the actual and potential alcoholic strengths;
   (d) "degree of alcohol" means the actual alcoholic strength. Determination of the alcoholic strenght must be carried out at 20 °C.

2. *For the purposes of heading No 22.04, "grape must in fermentation" means grape must having an actual alcoholic strength of less than three fifths of the total alcoholic strength.*

3. *For the purposes of heading No 22.05:*
   A. "Sparkling wine" (subheading 22.05 A) means a product having an actual alcoholic strength of not less than 8·5°, obtained:
   — either by first or second alcoholic fermentation of fresh grapes, grape must or wine, and releasing, when the container is opened, carbon dioxide derived exclusively from the fermentation,
   — or from wine and releasing, when the container is opened, carbon dioxide derived wholly or partly from the addition of this gas,
   and having, when kept at a temperature of 20 °C in closed containers, an excess pressure of not less than 3 atmospheres.

   B. "Total dry extract" means the content in grammes per litre of all the substances in a product which, under given physical conditions, do not volatilise.
   The total dry extract must be determined with the densimeter at 20 °C.

   C. (a) The presence in the products falling within subheading 22.05 C of the quantities of total dry extract per litre indicated in I, II, III and IV below does not affect their classification:
   I. Products of an alcoholic strength of not more than 13°: 90 g or less of total dry extract per litre;

II. Products of an alcoholic strength of more than 13° but not more than 15°: 130 g or less of total dry extract per litre;

III. Products of an alcoholic strength of more than 15° but not more than 18°: 130 g or less of total dry extract per litre;

IV. Products of an alcoholic strength of more than 18° but not more than 22°: 330 g or less of total dry extract per litre.

Products with a total dry extract exceeding the maximum quantity shown above in each category are to be classified in the following category, except that if the total dry extract exceeds 330 g per litre the products are to be classified in subheading 22.05 C V.

(b) The above rules do not apply to products falling within subheadings 22.05 C III a) 1, b) 1 and b) 2 and 22.05 C IV a) 1, b) 1 and b) 2.

4. Subheading 22.05 C shall be taken to include:

(a) Grape must with fermentation arrested by the addition of alcohol, that is to say a product:

— having an actual alcoholic strength of not less than 12° but less than 15°, and

— obtained by the addition to unfermented grape must having a natural alcoholic strength of not less than 8·5° of a product derived from the distillation of wine;

(b) Wine fortified for distillation, that is to say a product:

— having an actual alcoholic strength of not less than 18° but not more than 24°,

— obtained exclusively by the addition to wine containing no residual sugar of an unrectified product derived from the distillation of wine and having a maximum actual alcoholic strength of 86°, and

— having a maximum volatile acidity of 2·40 g/l, expressed as acetic acid;

(c) Liqueur wine, that is to say a product:

— having a total alcoholic strength of not less than 17·5° and an actual alcoholic strength of not less than 15°, but not more than 22°, and

— obtained from grape must or wine, which must come from vine varieties approved in the third country of origin for the production of liqueur wine and have a minimum natural alcoholic strength of 12°:

— by freezing, or

— by the addition during or after fermentation

(i) of a product derived from the distillation of wine, or

(ii) of concentrated grape must or, in the case of certain quality liqueur wines appearing on a list to be adopted of wines for which such practice is traditional, of grape must concentrated by direct heat, which, apart from this operation, corresponds to the definition of concentrated grape must, or

(iii) of a mixture of these products.

However, certain quality liqueur wines appearing on a list to be adopted may be obtained from unfermented fresh grape must which does not need to have a minimum natural alcoholic strength of 12°.

5. For the purposes of subheading 22.07 A, the expression "piquette" means the product obtained by the fermentation of untreated grape marc macerated in water or by extraction of fermented grape marc with water.

6. For the purposes of subheading 22.07 B I, the following are regarded as "sparkling":

— fermented beverages in bottles with "mushroom" stoppers held in place by ties or fastenings,

— fermented beverages otherwise put up, with an excess pressure of not less than 1·5 atmospheres, measured at a temperature of 20 °C.

7. For the purposes of subheading 22.10 A, the expression "wine vinegar" means vinegar obtained exclusively by acetous fermentation of wine and having a total acidity of not less than 60 g/l, expressed as acetic acid.

1. Except where the context otherwise requires, the headings of this Chapter are to be taken to apply only to goods which are in the crude state, or which have been washed (even with chemical substances eliminating the impurities without changing the structure of the product), crushed, ground, powdered, levigated, sifted, screened, concentrated by flotation, magnetic separation or other mechanical or physical processes (not including crystallisation) but not calcined or subjected to any further process other than a process specially mentioned in any heading in respect of the goods described therein.

2. This Chapter does not cover:
   (a) Sublimed sulphur, precipitated sulphur or colloidal sulphur (heading No 28.02);
   (b) Ferrous earth colours containing 70% or more by weight of combined iron evaluated as Fe_2O_3 (heading No 28.23);

Heading No 27.07 is to be taken to include products similar to those obtained by the distillation of high temperature coal tar but which are obtained by the distillation of low temperature coal tar or other mineral tars, by processing petroleum or by any other process, provided that the weight of the aromatic constituents exceeds that of the non-aromatic constituents.

3. References in heading No 27.10 to petroleum oils and oils obtained from bituminous minerals are to be taken to include not only petroleum oils and oils obtained from bituminous minerals but also similar oils, as well as those consisting of mixed unsaturated hydrocarbons, obtained by any process, provided that the weight of the non-aromatic constituents exceeds that of the aromatic constituents.

The term "viscosity V" means the kinematic viscosity at 50 °C expressed in centistokes by the ASTM D 445 method.

The term "diluted colour C" means the colour of a product, as determined by the ASTM D 1500 method, after one part of such product has been mixed with 99 parts by volume of carbon tetrachloride. The colour must be determined immediately after dilution.

This subheading covers only fuel oils of natural colour.

Subheading 27.10 C II does not cover heavy oils defined in paragraph F above for which it is not possible to determine: the distillation percentage at 250 °C by the ASTM D 86 method (zero shall be deemed to be a percentage); the kinematic viscosity at 50 °C by the ASTM D 445 method; or the diluted colour C by the ASTM D 1500 method. Such products fall within subheading 27.10 C III.

2. *For the purposes of heading No 27.11, the expressions "commercial propane" and "commercial butane" (subheading 27.11 B I) shall be taken to apply to products with a relative vapour pressure in the liquid state and at 37·8 °C of not more than 24·5 bars by the ASTM D 1267 method.*

3. *For the purposes of heading No 27.12, the expression "crude petroleum jelly" (subheading 27.12 A) shall be taken to apply to petroleum jelly of a natural colour higher than 4·5 by the ASTM D 1500 method.*

4. *For the purposes of subheading 27.13 B I, the term "crude" shall be taken to apply to products:*

   (a) with an oil content of 3·5 or higher by the ASTM D 721 method, if their viscosity at 100 °C is lower than 9 centistokes by the ASTM D 445 method; or

   (b) of a natural colour higher than 3 by the ASTM D 1500 method, if their viscosity at 100 °C is 9 centistokes or higher by the ASTM D 445 method.

5. *For the purposes of headings Nos 27.10, 27.11 and 27.12 and subheading 27.13 B, the term "specific process" shall be taken to apply to the following operations:*

   (a) vacuum distillation;

   (b) re-distillation by a very thorough fractionation process;

   (c) cracking;

   (d) reforming;

(e) extraction by means of selective solvents;

(f) the process comprising all the following operations: processing with concentrated sulphuric acid, oleum or sulphuric anhydride; neutralisation with alkaline agents; decolorisation and purification with naturally active earth, activated earth, activated charcoal or bauxite;

(g) polymerisation;

(h) alkylation;

(ij) isomerisation;

(k) (in respect of products of subheading 27.10 C only) desulphurisation with hydrogen resulting in a reduction of at least 85% of the sulphur content of the products processed (ASTM D 1266 59 T method);

(l) (in respect of products of heading No 27.10 only) deparaffining by a process other than filtering;

(m) (in respect of products of subheading 27.10 C only) treatment with hydrogen at a pressure of more than 20 atmospheres and a temperature of more than 250 °C with the use of a catalyst, other than to effect desulphurisation, when the hydrogen constitutes an active element in a chemical reaction. The further treatment with hydrogen of lubricating oils of subheading 27.10 C III (e.g. hydrofinishing or decolourisation) in order, more especially, to improve colour or stability shall not, however, be deemed to be a specific process;

(n) (in respect of products of subheading 27.10 C II only) atmospheric distillation, on condition that less than 30% of these products distils, by volume, including losses, at 300 °C by the ASTM D 86 method. If 30% or more by volume, including losses, of such product distils at 300 °C by the ASTM D 86 method, the quantities of products which may be obtained during the atmospheric distillation and which fall within subheadings 27.10 A and 27.10 B shall be dutiable at the same rates as those provided for under subheading 27.10 C II c) according to the kind and value of the products used and on the net weight of the products obtained. This rule shall not apply to products so obtained which, within a period of six months and subject to such other conditions as may be determined by the competent authorities, are to undergo a specific process or chemical transformation by a process not being a specific process;

(o) (in respect of products of subheading 27.10 C III only) treatment by means of a high-frequency electrical brush-discharge.

Should any preparatory treatment prior to the above-mentioned treatments be necessary by reason of technical requirements, the customs exemption shall apply only to the quantities of the products intended for and actually subjected to such above-mentioned treatments; any waste products arising during preparatory treatment shall also be exempt from customs duty.

6. *The quantities of products which may be obtained during chemical transformation, or during preparatory treatment which may be necessary by reason of technical requirements. and which fall within headings or subheadings 27.07 B I, 27.10, 27.11, 27.12, 27.13 B, 27.14 C, 29.01 A I, 29.01 B II a) and 29.01 D I) a) shall be dutiable at the same rates as those provided for in respect of products "for other purposes", according to the kind and value of the products used and on the net weight of the products obtained. This rule shall not apply to such products falling within headings or subheadings 27.10, 27.11, 27.12 and 27.13 B which, within a period of six months and subject to such other conditions as may be determined by the competent authorities, are to undergo a specific process or further chemical transformation.*

7. *Subheading 27.10 C III c) covers only oils to be mixed with other oils, with the products of heading No 38.14 or with thickeners in order to produce oils, greases or lubricating preparations by enterprises which, because of the plant with which they are equipped, cannot claim exemption from customs duty under the terms of Additional Note 5 above relating to heading No 27.10, and which process such oils for resale in plants equipped with all the following:*

— *at least two storage tanks for the basic oils in bulk;*

— *at least one mixing tank, with power-driven mixing equipment, with or without heating equipment, and with provision for the incorporation of additives; and*

— *packaging equipment.*

These last three requirements concerning plant equipment are also applicable when the mixing is carried out in rented plants or by a subcontractor.

   (a) Separate chemical elements and separate chemically defined compounds, whether or not containing impurities;

   (b) Products mentioned in (a) above dissolved in water;

   (c) Products mentioned in (a) above dissolved in other solvents provided that the solution constitutes a normal and necessary method of putting up these products adopted solely for reasons of safety or for transport and that the solvent does not render the product particularly suitable for some types of use rather than for general use;

   (d) The products mentioned in (a), (b) or (c) above with an added stabiliser necessary for their preservation or transport;

   (e) The products mentioned in (a), (b), (c) or (d) above with an added anti-dusting agent or a colouring substance added to facilitate their identification or for safety reasons, provided that the additions do not render the product particularly suitable for some types of use rather than for general use.

2. In addition to dithionites stabilised with organic substances and to sulphoxylates (heading No 28.36), carbonates and percarbonates of inorganic bases (heading No 28.42), cyanides and complex cyanides of inorganic bases (heading No 28.43), fulminates, cyanates and thiocyanates, of inorganic bases (heading No 28.44), organic products included in headings Nos 28.49 to 28.52 and metal and non-metal carbides (heading No 28.56), only the following compounds of carbon are also to be classified in the present Chapter:

CHAPTER 29

ORGANIC CHEMICALS

Notes

1. Except where the context otherwise requires, the headings of this Chapter are to be taken to apply only to:
   (a) Separate chemically defined organic compounds, whether or not containing impurities;
   (b) Mixtures of two or more isomers of the same organic compound (whether or not containing impurities), except mixtures of acyclic hydrocarbon isomers (other than stereoisomers), whether or not saturated (Chapter 27);
   (c) The products of headings Nos 29.38 to 29.42 inclusive, or the sugar ethers and sugar esters, and their salts, of heading No 29.43, or the products of heading No 29.44, whether or not chemically defined;
   (d) Products mentioned in (a), (b) or (c) above dissolved in water;
   (e) Products mentioned in (a), (b) or (c) above dissolved in other solvents provided that the solution constitutes a normal and necessary method of putting up these products adopted solely for reasons of safety or for transport and that the solvent does not render the product particularly suitable for some types of use rather than for general use;
   (f) The products mentioned in (a), (b), (c), (d) or (e) above with an added stabiliser necessary for their preservation or transport;
   (g) The products mentioned in (a), (b), (c), (d), (e) or (f) above with an added anti-dusting agent or a colouring or odoriferous substance added to facilitate their identification or for safety reasons, provided that the additions do not render the product particularly suitable for some types of use rather than for general use;
   (h) Diazonium salts, arylides used as couplers for these salts, and fast bases for azoic dyes, diluted to standard strengths.

2. This Chapter does not cover:
   (a) Goods falling within heading No 15.04 or glycerol (heading No 15.11);
   (b) Ethyl alcohol (heading No 22.08 or 22.09);
   (c) Methane and propane (heading No 27.11);
   (d) The compounds of carbon mentioned in Note 2 of Chapter 28;
   (e) Urea (heading No 31.02 or 31.05 as the case may be);
   (f) Colouring matter of vegetable or animal origin (heading No 32.04); synthetic organic dyestuffs (including pigment dyestuffs), synthetic organic products of a kind used as luminophores and products of the kind known as optical bleaching agents substantive to the fibre and natural indigo (heading No 32.05) and dyes or other colouring matter put up in forms or packings of a kind sold by retail (heading No 32.09);
   (g) Metaldehyde, hexamethylenetetramine and similar substances put up in forms (for example, tablets, sticks, or similar forms) for use as fuels, and liquid fuels of a kind used in mechanical lighters in containers of a capacity not exceeding 300 cm^3 (heading No 36.08);
   (h) Products put up as charges for fire-extinguishers or put up in fire-extinguishing grenades, of heading No 38.17; ink removers put up in packings for sale by retail, of heading No 38.19; or
   (ij) Optical elements, for example, of ethylenediamine tartrate (heading No 90.01).

3. Goods which could be included in two or more of the headings of this Chapter are to be classified in the latest of those headings.

4. *Unless otherwise stipulated in the subheadings of headings* Nos 29.03 to 29.05, 29.07 to 29.10, 29.12 to 29.21, inclusive, and *29.22 and 29.23*, any reference to halogenated, sulphonated, nitrated or nitrosated derivatives is to be taken to include a reference to any combinations of these derivatives (for example, sulphohalogenated, nitrohalogenated, nitrosulphonated and nitrosulphohalogenated derivatives).

   Nitro and nitroso groups are not to be taken as nitrogen-functions for the purpose of heading No 29.30.

5. (a) The esters of acid-function organic compounds falling within sub-Chapters I to VII with organic compounds of these sub-Chapters are to be classified with that compound which is classified in the heading placed last in the sub-Chapters.

29.01

(b) Esters of ethyl alcohol or glycerol with acid-function organic compounds of sub-Chapters I to VII are to be classified with the corresponding acid-function compounds.

(c) The salts of the esters referred to in paragraph (a) or (b) above with inorganic bases are to be classified with the corresponding esters.

(d) The salts of other acid- or phenol-function organic compounds falling within sub-Chapters I to VII with inorganic bases are to be classified with the corresponding acid- or phenol-function organic compounds.

(e) Halides of carboxylic acids are to be classified with the corresponding acids.

6. The compounds of headings Nos 29.31 to 29.34 are organic compounds the molecules of which contain, in addition to atoms of hydrogen, oxygen or nitrogen, atoms of other non-metals or of metals (such as sulphur, arsenic, mercury of lead) directly linked to carbon atoms.

Heading No 29.31 (organo-sulphur compounds) and heading No 29.34 (other organo-inorganic compounds) are to be taken not to include sulphonated or halogenated derivatives (including compound derivatives) which, apart from hydrogen, oxygen and nitrogen, only have directly linked to carbon the atoms of sulphur and of halogens which give them their nature of sulphonated or halogenated derivatives (or compound derivatives).

7. Heading No 29.35 (heterocyclic compounds) is to be taken not to include internal ethers, internal hemiacetals, methylene ethers of orthodihydric phenols, epoxides with three of four member rings, cyclic acetals, cyclic polymers of aldehydes, of thioaldehydes or of aldimines, anhydrides of polybasic acids, cyclic esters of polyhydric alcohols with polybasic acids, cyclic ureides and cyclis thioureides, imides of polybasic acids, hexamethylenetetramine and trimethylenetrinitramine.

Additional Note

Within any one heading, derivatives of a chemical compound (or a group of chemical compounds) falling within a subheading are to be classified, unless otherwise stipulated, within that subheading, provided that, in the same series of subheadings, there exists no final subheading "other" (with no additional text). If such a subheading exists, the derivatives in question shall be classified under that final subheading "other".

CHAPTER 40

RUBBER, SYNTHETIC RUBBER, FACTICE, AND ARTICLES THEREOF

Notes

1. Except where the context otherwise requires, throughout the Tariff the expression "rubber" means the following products, whether or not vulcanised or hardened: natural rubber, balata, gutta-percha and similar natural gums, synthetic rubber, and factice derived from oils, and such substances reclaimed.

2. This Chapter does not cover the following products of rubber and textiles, which fall generally within Section XI:

   (a) Knitted or crocheted fabric or articles thereof, elastic or rubberised (other than transmission, conveyor and elevator belts or belting, of rubberised knitted or crocheted fabric, of heading No 40.10); other elastic fabric or articles thereof;

   (b) Textile hosepiping and similar textile tubing, internally coated or lined with rubber (heading No 59.15);

   (c) Woven textile fabrics (other than the goods of heading No 40.10) impregnated, coated, covered or laminated with rubber:

   (i) Weighing not more than 1 500 g/m^2; or

   (ii) Weighing more than 1 500 g/m^2 and containing more than 50% by weight of textile material;

   and articles of those fabrics;

   (d) Felt impregnated or coated with rubber and containing more than 50% by weight of textile material, and articles thereof;

   (e) Bonded fibre fabrics and similar bonded yarn fabrics, impregnated or coated with rubber, or in which rubber forms the bonding substance, irrespective of their weight per square metre, and articles thereof;

   (f) Fabrics composed of parallel textile yarns agglomerated with rubber, irrespective of their weight per square metre, and articles thereof.

   However, plates, sheets and strip, of expanded foam or sponge rubber, combined with textile fabric, and articles thereof, are to be classified in Chapter 40 provided that the textile fabric is present merely for reinforcing purposes.

3. The following are also not covered by this Chapter:

   (a) Footwear or parts thereof falling within Chapter 64;

   (b) Headgear or parts thereof (including bathing caps) falling within Chapter 65;

   (c) Mechanical or electrical appliances or parts thereof (including electrical goods of all kinds), of hardened rubber, falling within Section XVI;

   (d) Articles falling within Chapter 90, 92, 94 or 96;

   (e) Articles falling within Chapter 97 (other than sports gloves and goods falling within heading No 40.11); or

   (f) Buttons, combs, smoking pipe stems, pens or other articles falling within Chapter 98.

4. In Note 1 to this Chapter and in headings Nos 40.02, 40.05 and 40.06, the expression "synthetic rubber" is to be taken to apply to:

   (a) Unsaturated synthetic substances which can be irreversibly transformed into non-thermoplastic substances by vulcanisation with sulphur and which, when so vulcanised as well as may be (without the addition of any substances such as plasticisers, fillers or reinforcing agents not necessary for the cross-linking), can produce substances which, at a temperature between 18° and 29 °C, will not break on being extended to three times their original length and will return, after being extended to twice their original length, within a period of five minutes, to a length not greater than one and a half times their original length.

   Such substances include cis-polyisoprene (IR), polybutadiene (BR), polychlorobutadiene (CR), polybutadienestyrene (SBR), polychlorobutadiene-acryonitrile (NCR), polybutadiene-acrylonitrile (NBR) and butyl rubber (IIR);

   (b) Thioplasts (TM); and

(c) Natural rubber modified by grafting or mixing with artificial plastic material, de-polymerised natural rubber, and mixtures of unsaturated synthetic substances with saturated synthetic high polymers, proivded that all the above-mentioned products comply with the requirements concerning vulcanisation, elongation and recovery in (a) above.

5. Headings Nos 40.01 and 40.02 are to be taken not to apply to:

(a) Natural or synthetic rubber latex (including pre-vulcanised rubber latex) compounded with vulcanising agents or accelerators, fillers or reinforcing agents, plasticiers, colouring matter (other than colouring matter added solely for the purpose of identification), or with any other substance; however, latex merely stabilised or concentrated, and thermo-sensitive and electro-positive latex are to be classified in heading No 40.01 or 40.02 as the case may be;

(b) Rubber which has been compounded with carbon black (with or without the addition of mineral oil) or with silica (with or without the addition of mineral oil) before coagulation or with any substance after coagulation; or

(c) Mixtures of any of the products specified in Note 1 to the present Chapter, whether or not compounded with any other substance.

6. Thread wholly of vulcanised rubber, of any cross-section of which any dimension exceeds 5 mm, is to be classified as strip, rod or profile shape, falling within heading No 40.08.

7. Heading No 40.10 is to be taken to include transmission, conveyor or elevator belts or belting of textile fabric impregnated, coated, covered or laminated with rubber or made from textile yarn or cord impregnated or coated with rubber.

8. For the purpose of heading No 40.06, pre-vulcanised rubber latex is to be deemed to be unvulcanised rubber latex. For the purposes of headings Nos 40.07 to 40.14, balata, gutta-percha and similar natural gums, and factice derived from oils, and such substances reclaimed, are to be deemed to be vulcanised rubber whether or not they have been vulcanised.

9. In headings Nos 40.05, 40.08 and 40.15 the expressions "plates", "sheets" and "strip" are to be taken to apply, and to apply only, to plates, sheets and strip, whether or not printed or otherwise surface-worked but not cut to shape or otherwise worked, and rectangular articles cut therefrom not further worked.

In heading No 40.08 the expressions "rods" and "profile shapes" and in heading No 40.15 the expressions "rods", "profile shapes" and "tubes" are to be taken to apply, and to apply only, to such products, whether or not cut to length or surface-worked but not otherwise worked.

4. Headings Nos 49.01 and 49.02 are to be taken not to apply to publications issued for advertising purposes by or for an advertiser named therein, or to publications which are primarily devoted to advertising (including tourist propaganda). (ii) Of other textile material except sheep's or lambs' wool or fine animal hair, in hanks or skeins;

(c) Multiple or cabled yarn of silk, noil or other waste silk, bleached, dyed or printed, of a length not less than 75 000 m/kg, measured multiple; and

(d) Single, multiple or cabled yarn of any textile material:

(i) In cross-reeled hanks or skeins; or

(ii) Put up on supports or in some other manner indicating its use in the textile industry (for example on cops, twisting mill tubes, pirns, conical bobbins or spindles, or reeled in the form of cocoons for embroidery looms).

(C) *The above provisions relating to flax and ramie are also applicable in respect of hemp.*

5. (a) For the purposes of heading No 55.07 *and subheading 56.07 A I*, "gauze" means a fabric with a warp composed wholly or in part of standing or ground threads and crossing or doup threads which cross the standing or ground threads making a half turn, a complete turn or more to form loops through which weft threads pass;

(b) For the purposes of heading No 58.08, "plain" means consisting solely of a single series of regular meshes of the same shape or size without any pattern or filling-in of the meshes. In applying this definition no account is to be taken of any minor open spaces which are inherent in the formation of the meshes.

6. For the purposes of this Section, the expression "made up" means:

(a) Cut otherwise than into rectangles;

(b) Made and finished by weaving and ready for use (or merely needing separation by cutting dividing threads) and not requiring sewing or further fabrication (for example, certain dusters, towels, table cloths, scarf squares and blankets);

(c) Hemmed or with rolled edges (except fabrics in the piece which have been cut from wider pieces and hemmed or rolled merely to prevent unravelling), or with a knotted fringe at any of the edges;

(d) Cut to size and having undergone a process of drawn thread work;

(e) Assembled by sewing, gumming or otherwise (other than piece goods consisting of two or more lengths of identical material joined end to end and piece goods composed of two or more fabrics assembled in layers, whether or not padded).

7. The headings of Chapters 50 to 57 and, except where the context otherwise requires, the headings of Chapters 58 to 60, are to be taken not to apply to goods made up within the meaning of Note 6 above. Chapters 50 to 57 are to be taken not to apply to goods falling within Chapter 58 or 59.

Additional Notes

1. *Subject to the provisions of Additional Note 2 below, the classification of goods containing two or more textile materials shall be effected within the headings of Chapters 58 to 63, in accordance with the following provisions, where applicable:*

(a) Goods containing more than 10% by weight of silk, noil or other waste silk or any combination thereof are to be classified as if consisting wholly of that one of those materials which predominates in weight;

(b) All other goods are to be classified as if consisting wholly of that one textile material which predominates in weight over any other single textile material; and

(c) The provisions of Note 2 (B) of this Section shall also apply.

2. *(a) In the case of goods falling within headings Nos 58.01 to 58.05 inclusive and having a ground fabric and a pile or looped surface or a surface with designs made with thread, no account shall be taken of the ground fabric;*

(b) In the case of goods falling within heading No 58.07 incorporating a support, a core or padding, no account shall be taken of such support, core or padding;

(c) In the case of embroidery falling within heading No 58.10, only the ground fabric shall be taken into consideration. However, in the case of embroidery without visible ground, classification shall be carried out solely according to the embroidering threads; and

(d) In the case of goods falling within Chapters 59 to 63, and composed of two or more fabrics, felts, braids, etc. of different textile materials, whether or not combined with components constituting only accessories (linings, stiffenings, collars, cuffs, lapels, ribbons and other trimmings, ornamental or not), account shall only be taken, for the application of these provisions, of the part considered as giving the goods their essential character within the meaning of Rule 3 for the interpretation of the nomenclature of the Tariff.

CHAPTER 51

MAN-MADE FIBRES (CONTINUOUS)

Notes

1. Throughout the Tariff, the term "man-made fibres" means fibres or filaments of organic polymers produced by manufacturing processes, either:
   (a) By polymerisation or condensation of organic monomers, for example, polyamides, polyesters, polyurethanes and polyvinyl derivatives; or
   (b) By chemical tranformation of natural organic polymers (such as cellulose, casein, proteins and algae), for example, viscose rayon, cuprammonium rayon (cupra), cellulose acetate and alginates.

   The term "synthetic textile fibres" applies to the fibres or filaments described under paragraph (a) above, and the term "regenerated textile fibres" to the fibres or filaments described under paragraph (b).

2. Heading No 51.01 is to be taken not to apply to continuous filament tow of man-made fibres falling within Chapter 56.

3. The expression "yarn of man-made fibres (continuous)" is to be taken not to apply to yarn (known as "ruptured filament yarn") of which the majority of the filaments have been ruptured by passage through rollers or other devices (Chapter 56).

4. Monofil of man-made fibre materials of which no cross-sectional dimension exceeds 1 mm is to be classified in heading No 51.01 when of a weight less than 6·6 mg/m (6·6 tex) and in heading No 51.02 in other cases. Monofil of which any cross-sectional dimension exceeds 1 mm is to be classified in Chapter 39.

   Strip (artificial straw and the like) of man-made fibre materials is to be classified in heading No 51.02 when of a width not exceeding 5 mm and in Chapter 39 in other cases.

CHAPTER 56

MAN-MADE FIBRES (DISCONTINUOUS)

Note

Heading No 56.02 is to be taken to apply only to continuous filament tow of man-made fibres, consisting of parallel filaments of a uniform length equal to the length of the tow, meeting the following specification:

(a) Length of tow exceeding 2 m;

(b) Twist less than 5 turns per metre;

(c) Weight per filament less than 6·6 mg/m (6·6 tex);

(d) In the case of filaments described in Note 1 (a) to Chapter 51, the tow must be drawn, that is to say, be incapable of being stretched by more than 100% of its length;

(e) Total weight of tow more than 2 g/m (2 000 tex).

Tow of a length not exceeding 2 m is to be classified in heading No 56.01.

CHAPTER 59

WADDING AND FELT; TWINE, CORDAGE, ROPES AND CABLES; SPECIAL FABRICS; IMPREGNATED AND COATED FABRICS; TEXTILE ARTICLES OF A KIND SUITABLE FOR INDUSTRIAL USE

Notes

1. For the purposes of this Chapter, the expression "textile fabric" is to be taken to apply only to the textile fabrics of Chapters 50 to 57 and headings Nos 58.04 and 58.05, the braids and trimmings in the piece of heading No 58.07, the tulle and other net fabrics of headings Nos 58.08 and 58.09, lace of heading No 58.09 and the knitted and crocheted fabrics of heading No 60.01.

2. (A) Heading No 59.08 is to be taken to apply to textile fabrics impregnated, coated, covered or laminated with preparations of cellulose derivatives or of other artificial plastic materials whatever the weight per square metre and whatever the nature of the plastic material (compact, foam, sponge or expanded).

   It does not, however, cover:

   (a) Fabrics in which the impregnation, coating or covering cannot be seen with the naked eye (usually Chapters 50 to 58 and 60); for the purpose of this provision, no account should be taken of any resulting change of colour;

   (b) Products which cannot, without fracturing, be bent manually around a cylinder of a diameter of 7 mm at a temperature between 15 and 30 °C (usually Chapter 39); or

   (c) Products in which the textile fabric is either completely embedded in artificial plastic material or coated or covered on both sides with such material (Chapter 39).

   (B) Heading No 59.12 does not apply to:

   (a) Fabrics in which the impregnation or coating cannot be seen with the naked eye (usually Chapters 50 to 58 and 60); for the purpose of this provision, no account should be taken of any resulting change of colour;

   (b) Fabrics painted with designs (other than painted canvas being theatrical scenery, studio back-cloths or the like);

   (c) Fabrics covered with flock, dust, powdered cork or the like and bearing designs resulting from these treatments; or

   (d) Fabrics finished with normal dressings having a basis of amylaceous or similar substances.

3. In heading No 59.11 the expression "rubberised textile fabrics" means:

   (a) Textile fabrics impregnated, coated, covered or laminated with rubber:

   (i) Weighing not more than 1 500 g/m²; or

   (ii) Weighing more than 1 500 g/m² and containing more than 50% by weight of textile material;

   (b) Fabrics composed of parallel textile yarns agglomerated with rubber, irrespective of their weight per square metre; and

   (c) Plates, sheets and strip, of expanded, foam or sponge rubber, combined with textile fabric, other than those falling in Chapter 40 by virtue of the last paragraph of Note 2 to that Chapter.

4. Heading No 59.16 is to be taken not to apply to:

   (a) Transmission, conveyor or elevator belting of a thickness of less than 3 mm; or

   (b) Transmission, conveyor or elevator belts or belting of textile fabric impregnated, coated, covered or laminated with rubber or made from textile yarn or cord impregnated or coated with rubber (heading No 40.10).

59.01

5. Heading No 59.17 is to be taken to apply to the following goods which are to be taken as not falling within any other heading of Section XI:

(a) Textile products (other than those having the character of the products of headings Nos 59.14 to 59.16), the following only:

(i) Textile fabric, felt and felt-lined woven fabric, coated, covered or laminated with rubber, leather or other material, of a kind commonly used for card clothing, and similar fabric of a kind commonly used in machinery or plant;

(ii) Bolting cloth;

(iii) Straining cloth of a kind commonly used in oil presses and the like, of textile fibres or of human hair;

(iv) Woven textile felts, whether or not impregnated or coated, of a kind commonly used in paper-making or other machinery, tubular or endless with single or multiple warp and/or weft, or flat woven with multiple warp and/or weft;

(v) Textile fabrics reinforced with metal, of a kind commonly used in machinery or plant;

(vi) Textile fabrics of the metallised yarn falling within heading No 52.01, of a kind commonly used in paper-making or other machinery;

(vii) Cords, braids and the like, whether or not coated, impregnated or reinforced with metal, of a kind commonly used in machinery or plant as packing or lubricating materials;

(b) Textile articles (other than those of headings Nos 59.14 to 59.16) of a kind commonly used in machinery or plant (for example, gaskets, washers, polishing discs and other machinery parts). *Textile fabrics, wadding, felt or bonded fibre or similar bonded yarn fabrics, in the piece, cut to length or simply cut to rectangular shape, are not considered to be textile articles of a kind commonly used in machinery or plant.*

1. The headings of this Chapter are to be taken to apply to articles of the kinds described therein only when made up of any textile fabric (including felt, bonded fibre fabric, braid or trimmings of heading No 58.07, tulle or other net fabrics and lace) or of fabric of metal thread, but not including articles of knitted or crocheted material other than those falling within heading No 61.09.

2. The headings of this Chapter do not cover:
   (a) Old clothing or other articles falling within heading No 63.01; or

3. For the purposes of headings Nos 61.01 to 61.04:
   (a) Articles which cannot be identified as either men's or boys' garments or as women's or girls' garments are to be classified in heading No 61.02 or 61.04 as the case may be;
   (b) The expression "infants' garments" is to be taken to apply to:
      (i) Garments for young children which are not identifiable as for wear exclusively by boys or by girls, and
      (ii) Babies' napkins.

4. Scarves and articles of the scarf type, square or approximately square, of which no side exceeds 60 cm are to be classified as handkerchiefs (heading No 61.05).
   Handkerchiefs of which any side exceeds 60 cm are to be classified in heading No 61.06.

5. The headings of this Chapter are to be taken to apply to textile fabrics (other than knitted or crocheted fabric) cut to shape for making articles of this Chapter.

CHAPTER 71

PEARLS, PRECIOUS AND SEMI-PRECIOUS STONES, PRECIOUS METALS, ROLLED PRECIOUS METALS, AND ARTICLES THEREOF; IMITATION JEWELLERY

Notes

1. Subject to Note 1 (a) to Section VI and except as provided below, all articles consisting wholly or partly:

   (a) Of pearls or of precious or semi-precious stones (natural, synthetic or reconstructed), or

   (b) Of precious metal or of rolled precious metal,

   are to be classified within this Chapter and not within any other Chapter.

2. (a) Headings Nos 71.12, 71.13 and 71.14 do not cover articles in which precious metal or rolled precious metal is present as minor constituents only, such as minor fittings or minor ornamentation (for example, monograms, ferrules and rims), and paragraph (b) of the foregoing Note does not apply to such articles;

   (b) Heading No 71.15 does not cover articles containing precious metal or rolled precious metal (other than as minor constituents).

3. This Chapter does not cover:

   (a) Amalgams of precious metal, and colloidal precious metal (heading No 28.49);

   (b) Sterile surgical suture materials, dental fillings and other goods falling in Chapter 30;

   (c) Goods falling in Chapter 32 (for example, lustres);

   (d) Handbags and other articles falling within heading No 42.02 or 42.03;

   (f) Goods falling within Section XI (textiles and textile articles);

   (g) Footwear (Chapter 64) and headgear (Chapter 65);

   (h) Umbrellas, walking-sticks and other articles falling within Chapter 66;

   (ij) Fans and hand screens of heading No 67.05;

   (k) Coin (Chapter 72 or 99);

   (l) Abrasive goods falling within headings Nos 68.04, 68.05, 68.06 or Chapter 82, containing dust or powder of precious or semi-precious stones (natural or synthetic); goods of Chapter 82 with a working part of precious or semi-precious stones (natural, synthetic or reconstructed) on a support of base metal; machinery, mechanical appliances and electrical goods, and parts thereof, falling within Section XVI, not being such articles wholly of precious or semi-precious stones (natural, synthetic or reconstructed);

   (m) Goods falling within Chapter 90, 91, or 92 (scientific instruments, clocks and watches, or musical instruments);

   (n) Arms or parts thereof (Chapter 93);

(o) Articles covered by Note 2 to Chapter 97;

(p) Articles falling within headings of Chapter 98 other than headings Nos 98.01 and 98.12; or

(q) Original sculptures and statuary (heading No 99.03), collectors' pieces (heading No 99.05) and antiques of an age exceeding one hundred years (heading No 99.06), other than pearls or precious or semi-precious stones.

4. (a) The expression "pearls" is to be taken to include cultured pearls;

(b) The expression "precious metal" means silver, gold, platinum and other metals of the platinum group;

(c) The expression "other metals of the platinum group" means iridium, osmium, palladium, rhodium, and ruthenium.

5. For the purposes of this Chapter, any alloy (including a sintered mixture) containing precious metal is to be treated as an alloy of precious metal, if, and only if, any one precious metal constitutes as much as 2%, by weight, of the alloy. Alloys of precious metal are to be classified to the following rules:

(a) An alloy containing 2% or more, by weight, of platinum is to be treated only as an alloy of platinum;

(b) An alloy containing 2% or more, by weight, of gold but no platinum, or less than 2%, by weight, of platinum, is to be treated only as an alloy of gold;

(c) Other alloys containing 2% or more, by weight, of silver are to be treated as alloys of silver.

For the purposes of this Note, metals of the platinum group are to be regarded as one metal and are to be treated as though they were platinum.

6. Except where the context otherwise requires, any reference in these Notes or elsewhere in the Tariff to precious metal or to any particular precious metal is to be taken to include a reference to alloys treated as alloys of precious metal or of the particular metal in accordance with the rules in Note 5 above, but not to rolled precious metal or to base metal or non-metals coated or plated with precious metal.

7. The expression "rolled precious metal" means material made with a base of metal upon one or more surfaces of which there is affixed by soldering, brazing, welding, hot-rolling or similar mechanical means a covering of precious metal. The expression is also to be taken to cover base metal inlaid with precious metal.

8. For the purposes of heading No 71.12, the expression "articles of jewellery" means:

10. For the purposes of heading No 71.16, the expression "imitation jewellery" means articles of jewellery within the meaning of paragraph (a) of Note 8 above (but not including buttons, studs, cuff-links or other articles, of heading No 98.01 or dress combs, hairslides or the like of heading No 98.12), not incorporating pearls precious or semi-precious stones (natural, synthetic or reconstructed) nor (except as plating or as minor constituents) precious metal or rolled precious metal and composed:

(a) Wholly or partly of base metal, whether or not plated with precious metal; or

(b) Of at least two materials (for example, wood and glass, bone and amber, mother of pearl and artificial plastic material), no account being taken of materials (for example, necklace strings) used only for assembly.

71.01

11. Cases, boxes and similar, containers imported with articles of this Chapter are to be classified with such articles if they are of a kind normally sold therewith. Cases, boxes and similar containers imported separately are to be classified under their appropriate headings.

Additional Note

   (m) Articles falling within Chapter 97 (for example, toys, games and sports requisites); or

   (n) Buttons, pens, pencil-holders, pen nibs or other articles falling within Chapter 98.

2. Throughout the Tariff, the expression "parts of general use" means:

   (a) Goods described in headings Nos 73.20, 73.25, 73.29, 73.31 and 73.32 and similar goods of other base metals;

   (b) Springs and leaves for springs, of base metal, other than clock and watch springs (heading No 91.11); and

   In Chapters 73 to 82 (but not in heading No 73.29 or 74.13) references to parts of goods do not include references to parts of general use as defined above.

   Subject to the preceding paragraph and to the Note to Chapter 83, the headings in Chapters 73 to 81 are to be taken not to apply to any goods falling within Chapter 82 or 83.

3. Classification of alloys (other than ferro-alloys and master alloys as defined in Chapters 73 and 74):

   (a) An alloy of base metals containing more than 10%, by weight, of nickel is to be classified as an alloy of nickel, except in the case of an alloy in which iron predominates by weight over each of the other metals.

   (b) Any other alloy of base metals is to be classified as an alloy of the metal which predominates by weight over each of the other metals.

   (c) An alloy composed of base metals of this Section and of elements not falling within this Section is to be treated as an alloy of base metals of this Section if the total weight of such metals equals or exceeds the total weight of the other elements present.

   (d) In this Section the term "alloy" is to be taken to include sintered mixtures of metal powders and heterogeneous intimate mixtures obtained by melting (other than cermets).

4. Unless the context otherwise requires, any reference in the Tariff to a base metal is to be taken to include a reference to alloys which, by virtue of Note 3 above, are to be classified as alloys of that metal.

5. Classification of composite articles:

Except where the headings otherwise require, articles of base metal (including articles of mixed materials treated as articles of base metal under the Interpretative Rules) containing two or more base metals are to be treated as articles of the base metal predominating by weight.

For this purpose:

(a) Iron and steel, or different kinds of iron or steel, are regarded as one and the same metal.

(b) An alloy is regarded as being entirely composed of that metal as an alloy of which, by virtue of Note 3, it is classified, and

(c) A cermet of heading No 81.04 is regarded as a single base metal.

6. For the purposes of this Section, the expression "waste and scrap" means waste and scrap metal fit only for the recovery of metal or for use in the manufacture of chemicals.

Additional Note

The classification of the goods of this Section shall not be affected by the application of a rough coating (for example, of grease, oil, tar, red lead or graphite) clearly intended to protect them from rust or other oxidation.

The expression also includes concrete reinforcing bars, which apart from minor indentations, flanges, grooves or other deformations produced during the rolling process, correspond to the above definition.

(ECSC) "Wire rod" is a product of solid section obtained exclusively by hot rolling, and which is hot-coiled. The term also includes:

CHAPTER 74

COPPER AND ARTICLES THEREOF

Notes

1. For the purposes of heading No 74.02, the expression "master alloys" means alloys (except copper phosphide (phosphor copper) containing more than 8% by weight of phosphorus) containing with other alloy elements more than 10% by weight of copper, not usefully malleable and commonly used as raw material in the manufacture of other alloys or as de-oxidants, de-sulphurising agents or for similar uses in the metallurgy of non-ferrous metals.

   (Copper phosphide (phosphor copper) containing more than 8% by weight of phosphorus falls within heading No 28.55 and not within this Chapter.)

2. In this Chapter the following expressions have the meanings hereby assigned to them:

   'a) Wire (heading No 74.03):

   Rolled, extruded or drawn products of solid section of any cross-sectional shape, of which no cross-sectional dimension exceeds 6 mm.

   (b) Wrought bars, rods, angles, shapes and sections (heading No 74.03):

   Rolled, extruded, drawn or forged products of solid section, of which the maximum cross-sectional dimension exceeds 6 mm and which, if they are flat, have a thickness exceeding one tenth of the width. Also cast or sintered products, of the same forms and dimensions, which have been subsequently worked after production (otherwise than by simple trimming or de-scaling), provided that they have not thereby assumed the character of articles or of products falling within other headings.

   Wire-bars and billets with their ends tapered or otherwise worked simply to facilitate their entry into machines for converting them into, for example, wire rod or tubes, are however to be taken to be unwrought copper of heading No 74.01.

   (c) Wrought plates, sheets and strip (heading No 74.04):

   Flat-surfaced, wrought products (coiled or not), of which the maximum cross-sectional dimension exceeds 6 mm, and of which the thickness exceeds 0·15 mm but does not exceed one tenth of the width.

   Heading No 74.04 is to be taken to apply, *inter alia*, to such products, whether or not cut to shape, perforated, corrugated, ribbed, channelled, polished or coated, provided that they do not thereby assume the character of articles or of products falling within other headings.

3. Heading No 74.07 is to be taken to apply, *inter alia*, to tubes, pipes and hollow bars which have been polished or coated, or which have been shaped or worked, such as bent, coiled, threaded, drilled, waisted, cone-shaped or finned. Heading No 74.08 is to be taken to apply, *inter alia*, to tube and pipe fittings which have been similarly treated.

CHAPTER 82

TOOLS, IMPLEMENTS, CUTLERY, SPOONS AND FORKS, OF BASE METAL; PARTS THEREOF

Notes

1. Apart from blow lamps, portable forges, grinding wheels with frameworks, manicure and chiropody sets, and goods classified in headings Nos 82.07 and 82.15, the present Chapter covers only articles with a blade, working edge, working surface or other working part of:
   (a) Base metal;
   (b) Metal carbides;
   (c) Precious or semi-precious stones (natural, synthetic or reconstructed) on a support of base metal; or
   (d) Abrasive materials on a support of base metal, provided that the articles have cutting teeth, flutes, grooves, or the like, of base metal, which retain their identity and function after the application of the abrasive.

2. Parts of base metal of the articles falling in the headings of this Chapter are to be classified with the articles of which they are parts, except parts separately specified as such and tool-holders for hand tools (heading No 84.48). However, parts of general use as defined in Note 2 to Section XV are in all cases excluded from this Chapter.

   Cutting plates for electric hair clippers are to be classified in heading No 82.13 and blades and heads for electric shavers are to be classified in heading No 82.11.

3. Sets (other than manicure or chiropody sets (heading No 82.13)) comprising an assortment of tools, cutlery, spoons, forks or other articles of a kind falling within the different headings of this Chapter, fitted in cabinets, boxes, cases or the like, are to be classified as that one of the constituent articles which is chargeable with the highest rate of duty.

4. Cases, boxes and similar containers imported with articles of this Chapter are to be classified with such articles if they are of a kind normally sold therewith. Cases, boxes and similar containers imported separately are to be classified under their appropriate headings.

2. Subject to Note 1 to this Section, Note 1 to Chapter 84 and Note 1 to Chapter 85, parts of machines (not being parts of the articles described in headings Nos 84.64, 85.23, 85.24, 85.25 and 85.27) are to be classified according to the following rules:

   (a) Goods of a kind described in any of the headings of Chapters 84 and 85 (other than headings Nos 84.65 and 85.28) are in all cases to be classified in their respective headings;

   (b) Other parts, if suitable for use solely or principally with a particular kind of machine, or with a number of machines falling within the same heading (including a machine falling within heading No 84.59 or 85.22) are to be classified with the machines of that kind *or in heading No 84.38, 84.48 or 84.55, as appropriate.* However, goods which are equally suitable for use principally with the goods of headings Nos 85.13 and 85.15 are to be classified in heading No 85.13;

   (c) All other parts are to be classified in heading No 84.65 or 85.28.

3. Unless the headings otherwise require, composite machines consisting of two or more machines fitted together to form a whole and other machines adapted for the purpose of performing two or more complementary or alternative functions are to be classified as if consisting only of that component or as being that machine which performs the principal function.

4. Motors and transmission, conveyor or elevator belts, for machinery or appliances to which they are fitted, or, if packed separately for convenience of transport, which are clearly intended to be fitted to or mounted on a

common base with the machine or appliance with which they are imported, are to be classified under the same heading as such machinery or appliances. *The weight of such motors and transmission, conveyor or elevator belts is to be included in the weights specified in the Tariff.*

5. For the purposes of these Notes, the expression "machine" means any machine, apparatus or appliance of a kind falling within Section XVI.

Additional Notes

1. *Tools necessary for the assembly or maintenance of machines are to be classified with those machines if imported with them. Interchangeable tools imported with machines are also to be classified therewith if they form part of the normal equipment of the machines and are normally sold with them.*

2. *Should the customs so require, the declarant shall produce, in support of his declaration, an illustrated document (for example, instructions, prospectus, a page from a catalogue, a photograph) giving the normal description of the machine, its uses and essential characteristics and, in respect of a disassembled machine, an assembly plan and a list of the contents of the various packages.*

3. *The provisions of General Rule A 2 (a) are also applicable, at the request of the declarant and subject to conditions stipulated by the competent authorities, to machines imported in split consignments.*

4. *Cases, boxes and similar containers imported with articles of this Section are to be classified with such articles if they are of a kind normally sold therewith. Cases, boxes and similar containers imported separately are to be classified under their appropriate headings.*

5. *Tractors coupled, even by means of special devices, to machines and mechanical appliances of this Section are in all cases to be classified separately (heading No 87.01).*

CHAPTER 84

BOILERS, MACHINERY AND MECHANICAL APPLIANCES; PARTS THEREOF

Notes

1. This Chapter does not cover:

   (a) Millstones, grindstones and other articles falling within Chapter 68;

   (b) Appliances and machinery (for example, pumps) and parts thereof, of ceramic material (Chapter 69);

   (c) Laboratory glassware of heading No 70.17; machinery and appliances and parts thereof, of glass (heading No 70.20 or 70.21);

   (d) Articles falling within heading No 73.36 or 73.37 and similar articles of other base metals (Chapters 74 to 81); or

   (e) Tools for working in the hand of heading No 85.05 or electro-mechanical domestic appliances of heading No 85.06.

2. Subject to the operation of Notes 3 and 4 to Section XVI, a machine or appliance which answers to a description in one or more of the headings Nos 84.01 to 84.21 and at the same time to a description in one other of the headings Nos 84.22 to 84.60, is to be classified under the appropriate heading of the former group and not the latter.

   Heading No 84.17 is, however, to be taken not to apply to:

   (a) Germination plant, incubators and brooders (heading No 84.28);

(b) Grain dampening machines (heading No 84.29);

(c) Diffusing apparatus for sugar juice extraction (heading No 84.30);

(d) Machinery for the heat-treatment of textile yarns, fabrics or made up textile articles (heading No 84.40); or

(e) Machinery or plant, designed for a mechanical operation, in which a change of temperature, even if necessary, is subsidiary.

Heading No 84.19 is to be taken not to apply to:

(a) Sewing machines for closing bags or similar containers (heading No 84.41); or

(b) Office machinery of heading No 84.54.

3. (A) For the purposes of heading No 84.53, the expression "automatic data processing machines" means:

(a) Digital machines having storages capable of storing not only the processing program or programs and the data to be processed but also a program for translating the formal programming language in which the programs are written into machine language. These machines must have a main storage which is directly accessible for the execution of a program and which has a capacity at least sufficient to store those parts of the processing and translating programs and the data immediately necessary for the current processing run. They must also be able themselves, on the basis of the instructions contained in the initial program, to modify, by logical decision, its execution during the processing run;

(b) Analogue machines capable of simulating mathematical models and comprising at least: analogue elements, control elements and programming elements;

(c) Hybrid machines consisting of either a digital machine with analogue elements or an analogue machine with digital elements.

(B) Automatic data processing machines may be in the form of systems consisting of a variable number of separately-housed units. A unit is to be regarded as being a part of the complete system if it meets all the following conditions:

(a) it is connectable to the central processing unit either directly or through one or more other units;

(b) it is specifically designed as part of such a system (it must, in particular, unless it is a power supply unit, be able to accept or deliver data in a form (code or signals) which can be used by the system).

Such units imported separately are also to be classified in heading No 84.53.

4. Heading No 84.62 is to be taken to apply, *inter alia*, to polished steel balls, the maximum and minimum diameters of which do not differ from the nominal diameter by more than 1% or by more than 0·05 mm, whichever is less. Other steel balls are to be classified under heading No 73.40.

5. A machine which is used for more than one purpose is, for the purposes of classification, to be treated as if its principal purpose were its sole purpose.

Subject to Note 2 to this Chapter and Note 3 to Section XVI, a machine whose principal purpose is not described in any heading or for which no one purpose is the principal purpose is, unless the context otherwise requires, to be classified in heading No 84.59. Heading No 84.59 is also to be taken to cover machines for making rope or cable (for example, stranding, twisting or cabling machines) from metal wire, textile yarn or any other material or from a combination of such materials.

Additional Notes

1. *For the purposes of subheading 84.06 A, the expression "aircraft engines" shall apply only to engines designed for fitting with an airscrew or rotor.*

2. *For the purpose of subheading 84.45 C VI a), the expression "micrometric adjusting system" shall mean any device allowing the determination or setting to at least 1/100th (0·01) mm of the movement of an important element of a machine, such as the table, the spindle, or the grinding head.*

3. *For the purposes of subheading 84.45 C VII, the expression "jig boring machines" shall be taken to apply only to machine-tools which:*

   (a) Carry out one or more machining operations on the co-ordinate principle; and

   (b) Are of such precision that any error in the travel of the work holder table and of the tool holder does not exceed 0·005 mm.

4. *(EURATOM) The term "nuclear reactors" (subheading 84.59 B) covers all the apparatus and appliances inside the area screened off by a biological shield, including, where appropriate, the shield itself; it also includes apparatus and appliances forming a whole with the parts contained inside the screen (inter alia, control rods and their operating mechanisms, provided these form a whole with the control rods or with other parts inside the screen).*

CHAPTER 85

ELECTRICAL MACHINERY AND EQUIPMENT; PARTS THEREOF

Notes

1. This Chapter does not cover:

   (a) Electrically warmed blankets, bed pads, foot-muffs and the like; electrically warmed clothing, footwear and ear pads and other electrically warmed articles worn on or about the person;

   (b) Articles of glass of heading No 70.11; or

   (c) Electrically heated furniture of Chapter 94.

2. Heading No 85.01 is to be taken not to apply to goods described in heading No 85.08, 85.09 or 85.21, other than metal tank mercury arc rectifiers which remain classified in heading No 85.01.

3. Heading No 85.06 is to be taken to apply only to the following electro-mechanical machines of types commonly used for domestic purposes:

   (a) Vacuum cleaners, floor polishers, food grinders and mixers, fruit juice extractors and fans, of any weight;

   (b) Other machines provided the weight of such other machines does not exceed 20 kg.

   The heading does not, however, apply to dish washing machines (heading No 84.19), centrifugal and other clothes washing machines (heading No 84.18 or 84.40), roller and other ironing machines (heading No 84.16 or 84.40), sewing machines (heading No 84.41) or to electro-thermic appliances (heading No 85.12).

4. For the purposes of heading No 85.19, "printed circuits" are to be taken to be circuits obtained by forming on an insulating base, by any printing process (for example, embossing, plating-up, etching) or by the "film circuit" technique, conductor elements, contacts or other printed components (for example, inductances, resistors, capacitors) alone or interconnected according to a pre-established pattern, other than elements which can produce, rectify, modulate or amplify an electrical signal (for example, semi-conductor elements).

   The term "printed circuits" does not cover circuits combined with elements other than those obtained during the printing process. Printed circuits may, however, be fitted with non-printed connecting elements.

   Thin- or thick-film circuits comprising passive and active elements obtained during the same technological process are to be classified in heading No 85.21.

5. For the purposes of heading No 85.21:

   (A) "Diodes, transistors and similar semi-conductor devices" are to be taken to be those devices the operation of which depends on variations in resistivity on the application of an electric field;

   (B) "Electronic microcircuits" are to be taken to be:

      (a) Microassemblies of the "fagot" module, moulded module, micromodule and similar types, consisting of discrete, active or both active and passive miniaturised components which are combined and interconnected;

      (b) Monolithic integrated circuits in which the circuit elements (diodes, transistors, resistors, capacitors, interconnections, etc.) are created in the mass (essentially) and on the surface of a semi-conductor material (doped silicon, for example) and are inseparably associated;

      (c) Hybrid integrated circuits in which passive and active elements, some obtained by thin- or thick-film technology (resistors, capacitors, interconnections, etc.), others by semi-conductor technology (diodes, transistors, monolithic integrated circuits, etc.), are combined, to all intents and purposes indivisibly, on a single insulating substrate (glass, ceramic, etc.). These circuits may also include miniaturised discrete components.

   For the classification of the articles defined in this Note, heading No 85.21 shall take precedence over any other heading in the Tariff which might cover them by reference to, in particular, their function.

   (b) Refractory goods of heading No 69.03; laboratory, chemical or industrial wares of heading No 69.09;

   (c) Glass mirrors, not optically worked, falling within heading No 70.09, and mirrors of base metal or of precious metal, not being optical elements, falling within heading No 83.12 or Chapter 71;

   (d) Goods falling within heading No 70.07, 70.11, 70.14, 70.15, 70.17 or 70.18;

   (e) Parts of general use, as defined in Note 2 to Section XV, of base metal (Section XV) or similar goods of artificial plastic materials (which are generally classified in heading No 39.07);

   (f) Pumps incorporating measuring devices, of heading No 84.10; weight-operated counting and checking machinery, and separately imported weights for balances (heading No 84.20); lifting and handling machinery of heading No 84.22; fittings for adjusting work or tools on machine-tools, of heading No 84.48, including fittings with optical devices for reading the scale (for example, "optical" dividing heads) but not those which are in themselves essentially optical instruments (for example, alignment telescopes); valves and other appliances of heading No 84.61;

   (g) Searchlights and spotlights, of a kind used on motor vehicles, of heading No 85.09, and radio navigational aid or radar apparatus of heading No 85.15;

   (c) Instruments or apparatus for measuring or detecting alpha, beta, gamma, X-ray, cosmic or similar radiations; and
   (d) Automatic regulators of electrical quantities, and instruments or apparatus for automatically controlling non-electrical quantities the operation of which depends on an electrical phenomenon varying according to the factor to be controlled.

6. Cases, boxes and similar containers imported with articles of this Chapter are to be classified with such articles if they are of a kind normally sold therewith. Cases, boxes and similar containers imported separately are to be classified under their appropriate headings.

Additional Note

The expression "electronic instruments and apparatus" in subheading 90.28 A means instruments and apparatus which incorporate one or more articles of heading No 85.21; but for the purposes of the foregoing, no account shall be taken of articles of heading No 85.21 which have solely the function of rectifying current or which are included in the power pack of instruments or apparatus.

CHAPTER 91

CLOCKS AND WATCHES AND PARTS THEREOF

Notes

1. For the purposes of headings Nos 91.02 and 91.07, the expression "watch movements" means movements regulated by a balance-wheel and hairspring or by any other system capable of determining intervals of time, not exceeding 12 mm in thickness when measured with the plate, the bridges and any additional outer plates.

2. Headings Nos 91.07 and 91.08 are to be taken not to apply to spring-operated or weight-operated motors not fitted, nor adapted to be fitted, with escapements (heading No 84.08).

3. This Chapter does not cover parts of general use, as defined in Note 2 to Section XV, of base metal (Section XV), nor similar goods of artificial plastic materials (which are generally classified in heading No 39.07). The Chapter also excludes weights, clock or watch glasses, watch chains or straps, parts of electrical equipment, ball bearings or bearing balls. Clock and watch springs are to be classified as clock or watch parts (heading No 91.11).

4. Except as provided in Notes 2 and 3, movements and other parts suitable for use both in clocks or watches and in other articles (for example, precision instruments) are to be taken as falling within this Chapter and not within any other Chapter.

5. Cases, boxes and similar containers imported with articles of this Chapter are to be classified with such articles if they are of a kind normally sold therewith. Cases, boxes and similar containers imported separately are to be classified under their appropriate headings.
