COMMISSION OF THE EUROPEAN COMMUNITIES

EUROPEAN PERSPECTIVES

THE EUROPEAN MONETARY SYSTEM

Origins, operation and outlook

by J. van Ypersele

with the collaboration of J.-C. Koeune

Preface by Robert Triffin

Since 13 March 1979, the exchange rates of the European Community currencies (with the exception of sterling and the drachma) have been regulated by the European Monetary System. The creation of the EMS arose from two complementary concerns: to stabilize exchange relationships between European currencies and to base this external stability on a better convergence of the Community's economies toward internal stability.

This book tries to answer the questions likely to be raised by the educated person over the mechanisms and the economic significance of the EMS, as well as its first results and its prospects.

Chapter I explains the motives behind this European initiative in a world where, following the demise of the Bretton Woods system, the 'floating' of the major currencies was accompanied in practice by enormous international monetary instability that hindered investment and economic recovery.

The creation, through the EMS, of a 'zone of monetary stability in Europe' was only the latest in the succession of efforts, in the monetary area, to pursue European economic integration. Chapter II recalls those previous attempts, from the statement of a number of objectives in the Rome Treaty to the concerted floating of European currencies in the 'snake'.

Chapter III examines the substance of the EMS and its machinery (exchange rate and intervention mechanism, role of the ECU, credit mechanisms), explaining the new elements in these mechanisms compared with the snake, and analysing the conditions required in theory for their proper functioning.

Chapter IV illustrates, with the help of statistical analyses, how the EMS actually operated during its first five years. Despite an international environment more volatile than ever, the performance has been good as far as exchange rates are concerned, and on the convergence front, though much still remains to be done, definite progress has been made towards internal stability since the last two parity realignments. In conclusion, the chapter looks at the recent rapid development in the private use of the ECU.

Finally, Chapter V deals with the future of the EMS. It describes the transition to the institutional phase (which has been put off) and underlines the urgent need for a better convergence of the participating economies. A number of possible reforms that would be likely to reinforce the system and to improve its capacity to withstand outside shocks are also set out.
