COMMISSION

COMMISSION DECISION

of 2 September 1992

concerning animal health conditions and veterinary certificates for the import of domestic animals of the bovine and porcine species from Switzerland

(92/460/EEC)

THE COMMISSION OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Economic Community,

Having regard to Council Directive 72/462/EEC of 12 December 1972 on health and veterinary inspection problems upon the import of bovine, ovine and caprine animals and swine and fresh meat or meat products from third countries ⁽¹⁾, as last amended by Regulation (EEC) No 3763/91 ⁽²⁾, and in particular Article 8 and 11 thereof,

Whereas Member States shall import domestic animals of the bovine and porcine species in accordance with the provisions of Council Directive 91/496/EEC ⁽³⁾ which lays down the principles governing the organization of veterinary checks on animals entering the Community from third countries;

Whereas the geographical proximity of Switzerland to the Community has implications for trade in live animals;

Whereas following Community veterinary missions it appears that animal health in Switzerland is controlled by veterinary services which can offer satisfactory guarantees concerning diseases which might be transmitted through the import of domestic animals of the bovine or porcine species;

Whereas the responsible Swiss veterinary authorities have confirmed that Switzerland has during the last 24 months been free from foot-and-mouth disease and during the last 12 months been free from rinderpest, contagious bovine

pleuro-pneumonia, vesicular stomatitis, bluetongue, classical swine fever, African swine fever, porcine enteroviral encephalomyelitis (Teschén disease), swine vesicular disease and vesicular exanthema and that no vaccinations have been carried out against any of those diseases during the past 12 months;

Whereas the responsible Swiss veterinary authorities have undertaken to notify the Commission and the Member States, by telex or telefax, within 24 hours, of the confirmation of the occurrence of any of the abovementioned diseases or of the adoption of vaccination against any of them or, within an appropriate period, of any proposed changes in the Swiss import rules concerning bovine animals or swine or the semen or embryos thereof;

Whereas bovine tuberculosis and brucellosis have been eradicated from Switzerland, vaccination against bovine brucellosis is not permitted and the measures taken by the responsible Swiss authorities to prevent a recrudescence of these diseases are sufficient to equate the status of Swiss herds, other than those under official restriction, with that of herds in the Community having the status of officially tuberculosis-free or officially brucellosis-free;

Whereas the responsible Swiss veterinary authorities have undertaken to supervise officially the issue of certificates arising from this Decision and to ensure that all relevant certificates, declarations and statements on which export certification may have been based remain on official file for at least 12 months following the dispatch of the animals to which they refer;

Whereas the responsible Swiss veterinary authorities have undertaken not to permit the issue of the certificates

⁽¹⁾ OJ No L 302, 31. 12. 1972, p. 28.

⁽²⁾ OJ No L 356, 24. 12. 1991, p. 1.

⁽³⁾ OJ No L 268, 24. 9. 1991, p. 56.

described in the Annexes to this Decision in respect of animals which have been imported into Switzerland unless such animals were imported in accordance with veterinary conditions at least as strict as the relevant requirements laid down in Directive 72/462/EEC, including any relevant subsidiary decisions;

Whereas the measures provided for in this Decision are in accordance with the opinion of the Standing Veterinary Committee,

HAS ADOPTED THIS DECISION:

Article 1

1. Without prejudice to paragraphs 2 and 4, Member States shall authorize the import from Switzerland of the following animals:

- (a) domestic animals of the bovine species for breeding or production which meet the requirements set out in the animal health certificate in Annex A to this Decision and are accompanied by such a certificate;
- (b) domestic animals of the bovine species for slaughter which meet the requirements set out in the animal health certificate in Annex B to this Decision and are accompanied by such a certificate;
- (c) domestic animals of the porcine species for breeding or production which meet the requirements set out in the animal health certificate in Annex C to this Decision and are accompanied by such a certificate;
- (d) domestic animals of the porcine species for slaughter which meet the requirements set out in the animal health certificate in Annex D to this Decision and are accompanied by such a certificate.

2. Member States may only authorize the importation from Switzerland of the domestic animals of the bovine or porcine species indicated in paragraph 1 which have been imported into Switzerland if such animals were imported from the Community or from a third country included in the list set out in the Annex to Council Decision 79/542/EEC ⁽¹⁾ in so far as it covers domestic animals of these species and only if the import was effected in accordance with veterinary conditions at least as strict as the requirements of Chapter II of Directive 72/462/EEC, including any relevant subsidiary decisions.

3. Member States shall require that animals which are submitted to tests in application of this Decision are continuously isolated under conditions approved by an official Swiss veterinarian from all cloven-hoofed animals not forming part of a consignment intended for export to the Community or not of equivalent health status to such animals, from the time of the first test to the time of loading.

4. Member States may only permit the entry onto their territory from Switzerland of bovine animals if such animals:

- (a) come from herds declared by the Swiss veterinary authorities to be enzootic bovine leukosis-free as defined

in Annex E to this Decision and have been subjected, within 30 days before export and with negative result, to an individual test for enzootic bovine leukosis carried out according to the Protocol in Annex I to Commission Decision 91/189/EEC ⁽²⁾;

or

- (b) are intended for meat production, are not more than 30 months of age, come from herds which are included in a national programme for the eradication of enzootic bovine leukosis and in which there has been no evidence whatever of that disease for at least two years and are permanently marked as described in Annex F to this Decision;

or

- (c) come from herds which are included in a national programme for the eradication of enzootic bovine leukosis, are consigned directly to a slaughterhouse and are slaughtered within three working days of their arrival there.

In the case of the animals referred to at (b) and (c), Member States shall ensure, by inspection, that such animals are clearly identified, shall supervise them until slaughter and shall take all measures necessary to prevent contamination of indigenous herds.

5. Member States shall not authorize the import of domestic animals of the bovine or porcine species other than as indicated in this Article.

Article 2

Pending the entry into force of any measures adopted by the Community for the eradication, prevention or control of a contagious or infectious bovine or porcine disease other than rabies, tuberculosis, brucellosis, foot-and-mouth disease, anthrax, rinderpest, contagious bovine pleuropneumonia, enzootic bovine leukosis, porcine enteroviral encephalomyelitis (Teschin disease), classical swine fever, African swine fever or swine vesicular disease, Member States may apply in respect of animals imported from Switzerland such additional health conditions as they apply to other animals within the framework of a national programme, submitted to and approved by the Commission, for the eradication, prevention or control of such disease.

As a temporary measure until 31 December 1992, Member States may apply this Article in respect of national programmes which have been submitted to but not yet approved by the Commission but in that case they must, without delay, provide the Commission and the other Member States with details of the relevant health conditions.

Article 3

1. Member States shall render the introduction into their territory of bovine or porcine animals from Switzerland subject to the provision of a guarantee that the animals to be imported have not been vaccinated against foot-and-mouth disease.

⁽¹⁾ OJ No L 146, 14. 6. 1979, p. 15.

⁽²⁾ OJ No L 96, 17. 4. 1991, p. 1.

2. Member States shall render the introduction into their territory of pigs from Switzerland subject to the provision of a guarantee that have not been vaccinated against classical swine fever and, in the case of pigs intended for breeding or production, a guarantee that they have shown a negative result to a test for the antibody produced by the virus of classical swine fever.

Article 4

This Decision shall enter into force 30 days after its notification to the Member States.

Article 5

This Decision is addressed to the Member States.

Done at Brussels, 2 September 1992.

For the Commission

Ray MAC SHARRY

Member of the Commission

ANNEX A

ANIMAL HEALTH CERTIFICATE

for domestic animals of the bovine species for breeding and production intended for consignment to the European Economic Community

(This certificate must accompany the consignment. It covers only animals in the same category — breeding or production — transported in the same railway wagon, lorry, aircraft or ship and consigned to the same destination. It must be completed on the date of loading and all time limits referred to expire on that date.)

No:

Exporting country: Switzerland

Ministry:

Competent issuing authority:

Country of destination:

Reference:

(Optional)

Reference to accompanying animal welfare certificate:

I. Number of animals:

(In words)

II. Identification of animals:

Number of animals	Cow, bull, ox, heifer, calf	Breed	Age	Official and other marks or brands (give number and position)

III. Origin of animals:

Names and addresses of farms of origin:

.....
.....

IV. Destination of animals:

The animals will be sent

from:

(Place of loading)

to:

(Place of destination)

by railway wagon/lorry/aircraft/ship:

(Indicate means of transport and registration marks, flight number or registered name, as appropriate)

Name and address of consignor:

.....

Name and address of consignee:

.....

V. Health information:

I, the undersigned official veterinarian, hereby certify:

1. that Switzerland has during the past 24 months been free from foot-and-mouth disease and during the past 12 months been free from rinderpest, contagious bovine pleuro-pneumonia, vesicular stomatitis and bluetongue, that no vaccinations have been carried out against any of these diseases, other than foot-and-mouth disease, during the past 12 months, that vaccination against foot-and-mouth disease has been prohibited since 15 November 1991 and that the importation of animals vaccinated against foot-and-mouth disease since that date is prohibited;
2. that the animals described in this certificate meet the following requirements:
 - (a) — they were born on the territory of Switzerland and have remained there since birth,
or
— they were imported, not less than six months ago, from a Member State of the European Community or from a third country included in the list annexed to Council Decision 70/542/EEC, in accordance with veterinary conditions at least as strict as the relevant requirements of Directive 72/462/EEC, including any subsidiary decisions;
(Delete unwanted reference)
 - (b) they have been examined this day and show no clinical signs of disease;
 - (c) they have not been vaccinated against foot-and-mouth disease;
 - (d) they come from herds which are not restricted under the Swiss tuberculosis eradication legislation,
— they have been subjected within the past 30 days and with negative result to an intradermal tuberculin test;
(Delete reference to test if certificate applies to animals under six weeks old)
 - (e) they come from herds which are not restricted under the Swiss brucellosis eradication legislation,
— they have been subjected within the past 30 days to a serum agglutination test which showed a brucella count of less than 30 international units of agglutination per ml,
— they have not been vaccinated against brucellosis;
(Delete reference to test if certificate applies to animals under 12 months old or to male castrates of any age)
 - (f) — they come from herds declared by the veterinary authorities of Switzerland to be enzootic bovine leukosis free as defined in Annex E to Decision 92/460/EEC and have been subjected, within the past 30 days and with negative result, to an individual test for enzootic bovine leukosis,
or
— they are intended for meat production, are not more than 30 months of age, come from herds which are included in a national programme for the eradication of enzootic bovine leukosis and in which there has been no evidence whatever of that disease during the past two years and are marked in the manner defined in Annex F to Decision 92/460/EEC;
(Delete according to the category of animal to which this certificate applies)
 - (g) they show no clinical sign of mastitis and the analysis (and second analysis, where relevant) of the milk carried out according to Annex D to Council Directive 64/432/EEC within the past 30 days showed no characteristic inflammatory condition, no specific pathogenic micro-organism or, in the case of a second analysis, the presence of an antibiotic;
(Delete section unless certificate applies to dairy cows)
 - (h) they are not animals which are to be destroyed under a national contagious or infectious disease eradication programme;
 - (i) they have remained during the past 30 days, or since birth if less than 30 days old, on a holding or holdings situated in the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Switzerland, during the past 30 days there has been no case of foot-and-mouth disease;
 - (j) they come from holdings on which there has been no evidence of:
— anthrax for the past 30 days,
— brucellosis for the past 12 months,

— tuberculosis for the past six months,

— rabies for the past six months;

- (k) they have been subjected with negative result to the following test(s) and conform to the following guarantees, as required by a Member State in application of Article 2 of Decision 92/460/EEC

.....
(Complete or delete as required by importing Member State)

- (l) they have been continuously isolated under conditions approved by an official veterinarian from all cloven-hoofed animals not intended for export to the Community or not of equivalent health status to such animals since the time of application of the first of the tests referred to in this certificate;

(Delete if not applicable)

- (m) they have received no anabolic substances for fattening purposes;

- (n) they have been obtained from a holding, or from,
(name of market)

a market which is officially authorized, under conditions as least as severe as those of Annex 2 to Decision 91/189/EEC for the export of bovine animals for breeding or production to the European Community;

and were assembled at
(name of assembly point)

and until dispatched onto the territory of the European Community they did not come into contact with any cloven-hoofed animals other than bovine or porcine animals meeting the requirements of Decision 92/460/EEC and were not at any place other than a place situated at the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Switzerland, there had been no incidence of foot-and-mouth disease during the previous 30 days.

(Delete reference to holding, market or assembly point as appropriate)

- (o) for the transport of live animals, were previously cleansed and disinfected with an officially authorized disinfectant and so constructed that faeces, urine, litter or fodder could not flow or fall out of the vehicle during transportation.

VI. All tests referred to in this certificate have, except where otherwise indicated, been carried out according to the Protocols set out in Annex I to Decision 91/189/EEC. All loading places through which the animals have passed conform to the standards set out in Annex II to the same Decision.

VII. This certificate is valid for 10 days from the date of loading.

Done at, on

.....
(Signature of official veterinarian, who must be a veterinarian in the whole-time employment of the State of Switzerland)

.....
(Name in capital letters, qualifications and title)

ANNEX B

ANIMAL HEALTH CERTIFICATE

for domestic bovine animals for immediate slaughter intended for consignment to the European Economic Community

(This certificate must accompany the consignment. It covers only animals transported in the same railway wagon, lorry, aircraft or ship, consigned to the same destination and intended to be taken immediately on arrival in the Member State of destination direct to a slaughterhouse and to be slaughtered not later than three working days after their entry in accordance with Article 13 of Directive 72/462/EEC. It must be completed on the date of loading and all time limits referred to expire on that date)

V. Health information:

I, the undersigned official veterinarian, hereby certify:

1. that Switzerland has during the past 24 months been free from foot-and-mouth disease and during the past 12 months been free from vesicular stomatitis, classical swine fever, African swine fever, porcine enteroviral encephalomyelitis (Teschén disease), swine vesicular disease and vesicular exanthema, that no vaccinations have been carried out against any of these diseases, other than foot-and-mouth disease, during the past 12 months and that the importation of animals vaccinated against foot-and-mouth disease and classical swine fever is prohibited;

2. that the animals described in this certificate meet the following requirements:

(a) — they were born on the territory of Switzerland and have remained there since birth,

or

— they were imported, not less than six months ago, from a Member State of the European Community or from a third country included in the list annexed to Decision 79/542/EEC, in accordance with veterinary conditions at least as strict as the relevant requirements of Directive 72/462/EEC, including any subsidiary decisions;

(Delete unwanted reference)

(b) they have been examined this day and show no clinical signs of disease;

(c) they have not been vaccinated against foot-and-mouth disease or against classical swine fever,

— they have been subjected within the past 30 days and with negative result in both cases to a test for classical swine fever antibodies and a test for swine vesicular disease antibodies;

(d) they come from swine herds which are not restricted under the Swiss brucellosis eradication legislation,

— they have been subjected within the past 30 days to a serum agglutination test which showed a brucella count of less than 30 international units of agglutination and with negative result to a complement-fixation test for brucellosis;

(Delete reference to tests if certificate applies to animals under four months of age)

(e) they are not animals which are to be destroyed under a national contagious or infectious disease eradication programme;

(f) they have remained during the past 30 days, or since birth if less than 30 days old, on a holding or holdings situated in the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Switzerland, during the past 30 days there has been no case of foot-and-mouth disease, classical swine fever, African swine fever or swine vesicular disease;

(g) they come from holdings on which there has been no evidence of:

— anthrax for the past 30 days,

— rabies for the past six months;

(h) they have been subjected, with negative result, to the following test(s) and conform to the following guarantees, as required by a Member State in application of Article 2 of Decision 92/460/EEC:

..... ;
(Complete or delete as required by importing Member State)

(i) they have been continuously isolated under conditions approved by an official veterinarian from all cloven-hoofed animals not intended for export to the Community or not of equivalent health status to such animals since the time of application of the first of the tests referred to in this certificate;

(j) they have received no anabolic substances for fattening purposes;

(k) they have been obtained from a holding, or from,

(name of market)

a market which is officially authorized, under conditions as least as severe as those of Annex 2 to Decision 91/189/EEC for the export of porcine animals for breeding or production to the European Community;

and were assembled at

and were assembled at
(name of assembly point)

and until dispatched onto the territory of the European Community they did not come into contact with any cloven-hoofed animals other than bovine or porcine animals meeting the requirements of Decision 92/460/EEC and were not at any place other than a place situated at the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Switzerland, there had been no incidence of foot-and-mouth disease, classical swine fever, African swine fever or swine vesicular disease during the previous 30 days;

(Delete reference to holding, market or assembly point as appropriate)

- (k) any transport vehicles or containers in which they were loaded conform to international standards for the transport of live animals, were previously cleansed and disinfected with an officially authorized disinfectant and so constructed that faeces, urine, litter or fodder could not flow or fall out of the vehicle during transportation.

VI. All tests referred to in this certificate have been carried out according to the Protocols set out in Annex I to Decision 91/189/EEC. All loading places through which the animals have passed conform to the standards set out in Annex II to the same Decision.

VII. This certificate is valid for 10 days from the date of loading.

ANNEX E

ENZOOTIC BOVINE LEUKOSIS-FREE HERDS AND REGIONS

1. A herd becomes established as enzootic bovine leukosis-free when:
 - (a) (i) there has been no evidence whatever of enzootic bovine leukosis in the herd for a period of at least two years;
and
(ii) it has been subjected with negative result to two herd tests for enzootic bovine leukosis at an interval of not less than four and not more than 12 months, each herd test consisting of one of the serological tests described in Annex I to Decision 91/189/EEC applied to all bovine animals in the herd over 24 months of age on the date of the test;
or
 - (b) the region in which it is situated becomes established as an enzootic bovine leukosis-free region, provided the status of the herd is not at the time suspended under the terms of paragraph 5.
2. A region becomes established as enzootic bovine leukosis-free when:
 - (a) at least 99,8 % of bovine herds have the status of enzootic bovine leukosis-free;
or
 - (b) (i) there has been no evidence whatever of enzootic bovine leukosis in the region for a period of at least three years;
and
(ii) all bovine herds in the region have been subjected to at least one herd test as described in paragraph 1;
and
(iii) at least 10 % of bovine herds in the region, selected on a random basis, have been subjected with negative result to at least two herd tests as described in paragraph 1.
3. A herd maintains its status as enzootic bovine leukosis-free as long as:
 - (a) there is no evidence whatever of enzootic bovine leukosis in the herd;
and
 - (b) all the bovine animals in the herd were born there or were introduced from herds of enzootic bovine leukosis-free status;
and
 - (c) within three years of the date of its establishment as enzootic bovine leukosis-free, and at intervals of not more than three years thereafter, it is subjected with negative result to a herd test as described in paragraph 1.
4. A region maintains its status as enzootic bovine leukosis-free as long as:
 - (a) each year, a proportion of the herds in the region, selected on a random basis and sufficient in number to demonstrate, with a 99 % confidence rating, that not more than 0,2 % of herds are infected with enzootic bovine leukosis, have been subjected to a herd test as described in paragraph 1;
or
 - (b) each year, a proportion of the herds in the region, sufficient to contain at least 20 % of the bovine animals in the region over 24 months of age, have been subjected with negative result to a herd test as described in paragraph 1.
5. The enzootic bovine leukosis free status of a herd is suspended when:
 - (a) the conditions described in paragraph 3 cease to apply;
or
 - (b) one or more animals give a positive result to one of the serological tests described in Annex I to Decision 91/189/EEC.
6. The enzootic bovine leukosis-free status of a region is suspended when:
 - (a) the conditions described in paragraph 4 cease to apply;
or
 - (b) enzootic bovine leukosis is detected and confirmed in more than 0,2 % of bovine herds in the region.

7. The enzootic bovine leukosis-free status of a herd is re-established when:

- (a) any reactor animal and, if the reactor is a cow, its progeny in the herd have been removed under the supervision of the veterinary authorities for slaughter, except that the competent authority may grant a derogation from the requirement for the removal of the progeny of a reactor cow if it is satisfied that the animal(s) was/were separated from its/their dam immediately after birth;

and

- (b) (i) if the suspension results from a positive test on a single animal, the herd has been subjected with negative result and not less than three months after the withdrawal referred to in paragraph 7 (a) to a herd test as described in paragraph 1;

or

- (ii) if the suspension results from a positive test on more than one animal, the herd has been subjected to two herd tests as described in paragraph 1, the first being applied not less than three months after the withdrawal referred to in paragraph 7 (a) and the second not less than four or more than 12 months later, the tests to include any progeny of a reactor cow retained in the herd under the derogation referred to in paragraph 7 (a), regardless of their age at the time of test;

and

- (c) an epizootological enquiry has been conducted on all herds epizootologically linked to the infected herd.

8. The enzootic bovine leukosis-free status of a region is re-established when:

- (a) at least 99,8 % of bovine herds in the region have the status of enzootic bovine leukosis-free;

and

- (b) at least 20 % of bovine herds in the region have been subjected with negative result to two herd tests as described in paragraph 1, at an interval of not less than four and not more than 12 months.

ANNEX F

Mark to be applied to bovine animals in application of Article 1 (4) (b)

A permanent mark, having the dimensions indicated below, applied to and visible on at least two places on the hind-quarters of each animal using the technique known as 'freeze-branding'.

COMMISSION DECISION

of 2 September 1992

concerning animal health conditions and veterinary certificates for the import of domestic animals of the bovine and porcine species from Sweden

(92/461/EEC)

THE COMMISSION OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Economic Community,

Having regard to Council Directive 72/462/EEC of 12 December 1972 on health and veterinary inspection problems upon the import of bovine, ovine and caprine animals and swine and fresh meat or meat products from third countries ⁽¹⁾, as last amended by Regulation (EEC) No 3763/91 ⁽²⁾, and in particular Article 8 and 11 thereof,

Whereas Member States shall import domestic animals of the bovine and porcine species in accordance with the provisions of Council Directive 91/496/EEC ⁽³⁾ which lays down the principles governing the organization of veterinary checks on animals entering the Community from third countries;

Whereas the geographical proximity of Sweden to the Community has implications for trade in live animals;

Whereas following Community veterinary missions it appears that animal health in Sweden is controlled by veterinary services which can offer satisfactory guarantees concerning diseases which might be transmitted through the import of domestic animals of the bovine or porcine species;

Whereas the responsible Swedish veterinary authorities have confirmed that Sweden has during the last 24 months been free from foot-and-mouth disease and during the last 12 months been free from rinderpest, contagious bovine pleuro-pneumonia, vesicular stomatitis, bluetongue, classical swine fever, African swine fever, porcine enteroviral encephalomyelitis (Teschén disease), swine vesicular disease and vesicular exanthema and that no vaccinations have been carried out against any of those diseases during the past 12 months;

Whereas the responsible Swedish veterinary authorities have undertaken to notify the Commission and the Member States, by telex or telefax, within 24 hours, of the confirmation of the occurrence of any of the abovementioned diseases or of the adoption of vaccination against any of them or, within an appropriate period, of any proposed changes in the Swedish import rules concerning bovine animals or swine or the semen or embryos thereof;

Whereas bovine tuberculosis and brucellosis have been eradicated from Sweden, vaccination against bovine brucellosis is not permitted and the measures taken by the responsible Swedish authorities to prevent a recrudescence of these diseases are sufficient to equate the status of Swedish herds, other than those under official restriction, with that of herds in the Community having the status of officially tuberculosis-free or officially brucellosis-free;

Whereas the responsible Swedish veterinary authorities have undertaken to supervise officially the issue of certificates arising from this Decision and to ensure that all relevant certificates, declarations and statements on which export certification may have been based remain on official file for at least 12 months following the dispatch of the animals to which they refer;

Whereas the responsible Swedish veterinary authorities have undertaken not to permit the issue of the certificates described in the Annexes to this Decision in respect of animals which have been imported into Sweden unless such animals were imported in accordance with veterinary conditions at least as strict as the relevant requirements laid down in Directive 72/462/EEC, including any relevant subsidiary decisions;

Whereas the measures provided for in this Decision are in accordance with the opinion of the Standing Veterinary Committee,

HAS ADOPTED THIS DECISION:

Article 1

1. Without prejudice to paragraphs 2 and 4, Member States shall authorize the import from Sweden of the following animals:

- (a) domestic animals of the bovine species for breeding or production which meet the requirements set out in the animal health certificate in Annex A to this Decision and are accompanied by such a certificate;
- (b) domestic animals of the bovine species for slaughter which meet the requirements set out in the animal health certificate in Annex B to this Decision and are accompanied by such a certificate;

⁽¹⁾ OJ No L 302, 31. 12. 1972, p. 28.

⁽²⁾ OJ No L 356, 24. 12. 1991, p. 1.

⁽³⁾ OJ No L 268, 24. 9. 1991, p. 56.

- (c) domestic animals of the porcine species for breeding or production which meet the requirements set out in the animal health certificate in Annex C to this Decision and are accompanied by such a certificate;
- (d) domestic animals of the porcine species for slaughter which meet the requirements set out in the animal health certificate in Annex D to this Decision and are accompanied by such a certificate.

2. Member States may only authorize the importation from Sweden of the domestic animals of the bovine or porcine species indicated in paragraph 1 which have been imported into Sweden if such animals were imported from the Community or from a third country included in the list set out in the Annex to Council Decision 79/542/EEC ⁽¹⁾ in so far as it covers domestic animals of these species and only if the import was effected in accordance with veterinary conditions at least as strict as the requirements of Chapter II of Directive 72/462/EEC, including any relevant subsidiary decisions.

3. Member States shall require that animals which are submitted to tests in application of this Decision are continuously isolated under conditions approved by an official Swedish veterinarian from all cloven-hoofed animals not forming part of a consignment intended for export to the Community or not of equivalent health status to such animals, from the time of the first test to the time of loading.

4. Member States may only permit the entry onto their territory from Sweden of bovine animals if such animals:

- (a) come from herds declared by the Swedish veterinary authorities to be enzootic bovine leukosis-free as defined in Annex E to this Decision and have been subjected, within 30 days before export and with negative result, to an individual test for enzootic bovine leukosis carried out according to the Protocol in Annex I to Commission Decision 91/189/EEC ⁽²⁾;

or

- (b) are intended for meat production, are not more than 30 months of age, come from herds which are included in a national programme for the eradication of enzootic bovine leukosis and in which there has been no evidence whatever of that disease for at least two years and are permanently marked as described in Annex F to this Decision;

or

- (c) come from herds which are included in a national programme for the eradication of enzootic bovine leukosis, are consigned directly to a slaughterhouse and are slaughtered within three working days of their arrival there.

In the case of the animals referred to at (b) and (c), Member States shall ensure, by inspection, that such animals are clearly identified, shall supervise them until slaughter and shall take all measures necessary to prevent contamination of indigenous herds.

5. Member States shall not authorize the import of domestic animals of the bovine or porcine species other than as indicated in this Article.

Article 2

Pending the entry into force of any measures adopted by the Community for the eradication, prevention or control of a contagious or infectious bovine or porcine disease other than rabies, tuberculosis, brucellosis, foot-and-mouth disease, anthrax, rinderpest, contagious bovine pleuropneumonia, enzootic bovine leukosis, porcine enteroviral encephalomyelitis (Teschin disease), classical swine fever, African swine fever or swine vesicular disease, Member States may apply in respect of animals imported from Hungary such additional health conditions as they apply to other animals within the framework of a national programme, submitted to and approved by the Commission, for the eradication, prevention or control of such disease.

As a temporary measure until 31 December 1992, Member States may apply this Article in respect of national programmes which have been submitted to but not yet approved by the Commission but in that case they must, without delay, provide the Commission and the other Member States with details of the relevant health conditions.

Article 3

1. Member States shall render the introduction into their territory of bovine or porcine animals from Sweden subject to the provision of a guarantee that the animals to be imported have not been vaccinated against foot-and-mouth disease.

2. Member States shall render the introduction into their territory of pigs from Sweden subject to the provision of a guarantee that have not been vaccinated against classical swine fever and, in the case of pigs intended for breeding or production, a guarantee that they have shown a negative result to a test for the antibody produced by the virus of classical swine fever.

Article 4

This Decision shall enter into force 30 days after its notification to the Member States.

Article 5

This Decision is addressed to the Member States.

Done at Brussels, 2 September 1992.

For the Commission

Ray MAC SHARRY

Member of the Commission

ANNEX A

ANIMAL HEALTH CERTIFICATE

for domestic animals of the bovine species for breeding and production intended for consignment to the European Economic Community

(This certificate must accompany the consignment. It covers only animals in the same category — breeding or production — transported in the same railway wagon, lorry, aircraft or ship and consigned to the same destination. It must be completed on the date of loading and all time limits referred to expire on that date.)

No:

Exporting country: Sweden

Ministry:

Competent issuing authority:

Country of destination:

Reference:

(Optional)

Reference to accompanying animal welfare certificate:

I. Number of animals:

(In words)

II. Identification of animals:

Number of animals	Cow, bull, ox, heifer, calf	Breed	Age	Official and other marks or brands (give number and position)

III. Origin of animals:

Names and addresses of farms of origin:

.....
.....

IV. Destination of animals:

The animals will be sent

from:

(Place of loading)

to:

(Place of destination)

by railway wagon/lorry/aircraft/ship:

(Indicate means of transport and registration marks, flight number or registered name, as appropriate)

Name and address of consignor:

.....

Name and address of consignee:

.....

V. Health information:

I, the undersigned official veterinarian, hereby certify:

1. that Sweden has during the past 24 months been free from foot-and-mouth disease and during the past 12 months been free from rinderpest, contagious bovine pleuro-pneumonia, vesicular stomatitis and bluetongue, that no vaccinations have been carried out against any of these diseases, other than foot-and-mouth disease, during the past 12 months, that vaccination against foot-and-mouth disease has been prohibited since 15 November 1991 and that the importation of animals vaccinated against foot-and-mouth disease since that date is prohibited;
2. that the animals described in this certificate meet the following requirements:
 - (a) — they were born on the territory of Sweden and have remained there since birth,
or
— they were imported, not less than six months ago, from a Member State of the European Community or from a third country included in the list annexed to Council Decision 70/542/EEC, in accordance with veterinary conditions at least as strict as the relevant requirements of Directive 72/462/EEC, including any subsidiary decisions;
(Delete unwanted reference)
 - (b) they have been examined this day and show no clinical signs of disease;
 - (c) they have not been vaccinated against foot-and-mouth disease;
 - (d) they come from herds which are not restricted under the Swedish tuberculosis eradication legislation,
— they have been subjected within the past 30 days and with negative result to an intradermal tuberculin test;
(Delete reference to test if certificate applies to animals under six weeks old)
 - (e) they come from herds which are not restricted under the Swedish brucellosis eradication legislation,
— they have been subjected within the past 30 days to a serum agglutination test which showed a brucella count of less than 30 international units of agglutination per ml,
— they have not been vaccinated against brucellosis;
(Delete reference to test if certificate applies to animals under 12 months old or to male castrates of any age)
 - (f) — they come from herds declared by the veterinary authorities of Sweden to be enzootic bovine leukosis free as defined in Annex E to Decision 92/461/EEC and have been subjected, within the past 30 days and with negative result, to an individual test for enzootic bovine leukosis,
or
— they are intended for meat production, are not more than 30 months of age, come from herds which are included in a national programme for the eradication of enzootic bovine leukosis and in which there has been no evidence whatever of that disease during the past two years and are marked in the manner defined in Annex F to Decision 92/461/EEC;
(Delete according to the category of animal to which this certificate applies)
 - (g) they show no clinical sign of mastitis and the analysis (and second analysis, where relevant) of the milk carried out according to Annex D to Council Directive 64/432/EEC within the past 30 days showed no characteristic inflammatory condition, no specific pathogenic micro-organism or, in the case of a second analysis, the presence of an antibiotic;
(Delete section unless certificate applies to dairy cows)
 - (h) they are not animals which are to be destroyed under a national contagious or infectious disease eradication programme;
 - (i) they have remained during the past 30 days, or since birth if less than 30 days old, on a holding or holdings situated in the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Sweden, during the past 30 days there has been no case of foot-and-mouth disease;
 - (j) they come from holdings on which there has been no evidence of:
— anthrax for the past 30 days,
— brucellosis for the past 12 months,

— tuberculosis for the past six months,

— rabies for the past six months;

- (k) they have been subjected with negative result to the following test(s) and conform to the following guarantees, as required by a Member State in application of Article 2 of Decision 92/461/EEC

..... ;
(Complete or delete as required by importing Member State)

- (l) they have been continuously isolated under conditions approved by an official veterinarian from all cloven-hoofed animals not intended for export to the Community or not of equivalent health status to such animals since the time of application of the first of the tests referred to in this certificate;

(Delete if not applicable)

- (m) they have received no anabolic substances for fattening purposes;

- (n) they have been obtained from a holding, or from,
(name of market)

a market which is officially authorized, under conditions at least as severe as those of Annex 2 to Decision 91/189/EEC for the export of bovine animals for breeding or production to the European Community;

and were assembled at,
(name of assembly point)

and until dispatched onto the territory of the European Community they did not come into contact with any cloven-hoofed animals other than bovine or porcine animals meeting the requirements of Decision 92/461/EEC and were not at any place other than a place situated at the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Sweden, there had been no incidence of foot-and-mouth disease during the previous 30 days.

(Delete reference to holding, market or assembly point as appropriate)

- (o) for the transport of live animals, were previously cleansed and disinfected with an officially authorized disinfectant and so constructed that faeces, urine, litter or fodder could not flow or fall out of the vehicle during transportation.

VI. All tests referred to in this certificate have, except where otherwise indicated, been carried out according to the Protocols set out in Annex I to Decision 91/189/EEC. All loading places through which the animals have passed conform to the standards set out in Annex II to the same Decision.

VII. This certificate is valid for 10 days from the date of loading.

V. Health information:

I, the undersigned official veterinarian, hereby certify:

1. that Sweden has during the past 24 months been free from foot-and-mouth disease and during the past 12 months been free from vesicular stomatitis, classical swine fever, African swine fever, porcine enteroviral encephalomyelitis (Teschin disease), swine vesicular disease and vesicular exanthema, that no vaccinations have been carried out against any of these diseases, other than foot-and-mouth disease, during the past 12 months and that the importation of animals vaccinated against foot-and-mouth disease and classical swine fever is prohibited;

2. that the animals described in this certificate meet the following requirements:

- (a) — they were born on the territory of Sweden and have remained there since birth,

or

- they were imported, not less than six months ago, from a Member State of the European Community or from a third country included in the list annexed to Decision 79/542/EEC, in accordance with veterinary conditions at least as strict as the relevant requirements of Directive 72/462/EEC, including any subsidiary decisions;

(Delete unwanted reference)

- (b) they have been examined this day and show no clinical signs of disease;

- (c) they have not been vaccinated against foot-and-mouth disease or against classical swine fever,

- they have been subjected within the past 30 days and with negative result in both cases to a test for classical swine fever antibodies and a test for swine vesicular disease antibodies;

- (d) they come from swine herds which are not restricted under the Swedish brucellosis eradication legislation,

- they have been subjected within the past 30 days to a serum agglutination test which showed a brucella count of less than 30 international units of agglutination and with negative result to a complement-fixation test for brucellosis;

(Delete reference to tests if certificate applies to animals under four months of age)

- (e) they are not animals which are to be destroyed under a national contagious or infectious disease eradication programme;

- (f) they have remained during the past 30 days, or since birth if less than 30 days old, on a holding or holdings situated in the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Sweden, during the past 30 days there has been no case of foot-and-mouth disease, classical swine fever, African swine fever or swine vesicular disease;

- (g) they come from holdings on which there has been no evidence of:

- anthrax for the past 30 days,
- rabies for the past six months;

- (h) they have been subjected, with negative result, to the following test(s) and conform to the following guarantees, as required by a Member State in application of Article 2 of Decision 92/461/EEC:

.....;
(Complete or delete as required by importing Member State)

- (i) they have been continuously isolated under conditions approved by an official veterinarian from all cloven-hoofed animals not intended for export to the Community or not of equivalent health status to such animals since the time of application of the first of the tests referred to in this certificate;

- (j) they have received no anabolic substances for fattening purposes;

- (k) they have been obtained from a holding, or from,
(name of market)

a market which is officially authorized, under conditions as least as severe as those of Annex 2 to Decision 91/189/EEC for the export of porcine animals for breeding or production to the European Community;

and were assembled at
(name of assembly point)

and until dispatched onto the territory of the European Community they did not come into contact with any cloven-hoofed animals other than bovine or porcine animals meeting the requirements of Decision 92/461/EEC and were not at any place other than a place situated at the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Sweden, there had been no incidence of foot-and-mouth disease, classical swine fever, African swine fever or swine vesicular disease during the previous 30 days;

(Delete reference to holding, market or assembly point as appropriate)

- (1) any transport vehicles or containers in which they were loaded conform to international standards for the transport of live animals, were previously cleansed and disinfected with an officially authorized disinfectant and so constructed that faeces, urine, litter or fodder could not flow or fall out of the vehicle during transportation.

VI. All tests referred to in this certificate have been carried out according to the Protocols set out in Annex I to Decision 91/189/EEC. All loading places through which the animals have passed conform to the standards set out in Annex II to the same Decision.

VII. This certificate is valid for 10 days from the date of loading.

ANNEX D

ANIMAL HEALTH CERTIFICATE

for domestic animals of the porcine species for immediate slaughter intended for consignment to the European Economic Community

(This certificate must accompany the consignment. It covers only animals transported in the same railway wagon, lorry, aircraft or ship, consigned to the same destination and intended to be taken immediately on arrival in the Member State of destination direct to a slaughterhouse and to be slaughtered not later than three working days after their entry in accordance with Article 13 of Directive 72/462/EEC. It must be completed on the date of loading and all time limits referred to expire on that date)

V. Health information:

I, the undersigned official veterinarian, hereby certify:

1. that Sweden has during the past 24 months been free from foot-and-mouth disease and during the past 12 months been free from vesicular stomatitis, classical swine fever, African swine fever, porcine enteroviral encephalomyelitis (Teschin disease), swine vesicular disease and vesicular exanthema, that no vaccinations have been carried out against any of these diseases, during the past 12 months and that the importation of animals vaccinated against foot-and-mouth disease and classical swine fever is prohibited;

2. that the animals described in this certificate meet the following requirements:

(a) — they were born on the territory of Sweden and have remained there since birth,

or

— they were imported, not less than three months ago, from a Member State of the European Community or from a third country included in the list annexed to Decision 79/542/EEC, in accordance with veterinary conditions at least as strict as the relevant requirements of Directive 72/462/EEC, including any subsidiary decisions;

(Delete unwanted reference)

(b) they have been examined this day and show no clinical signs of disease;

(c) they have not been vaccinated against foot-and-mouth disease or against classical swine fever;

(d) they are not animals which are to be destroyed under a national contagious or infectious disease eradication programme;

(e) they have remained during the past 30 days, or since birth if less than 30 days old, on a holding or holdings situated in the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Sweden, during the past 30 days there has been no case of foot-and-mouth disease, classical swine fever, African swine fever or swine vesicular disease;

(f) they come from holdings on which there has been no evidence of anthrax for the past 30 days;

(g) they have been subjected with negative result to the following test(s) and conform to the following guarantees, as required by a Member State in application of Article 2 of Decision 92/461/EEC

..... ;
(Complete or delete as required by importing Member State)

(h) they have been continuously isolated under conditions approved by an official veterinarian from all cloven-hoofed animals not intended for export to the Community or not of equivalent health status to such animals from the time of application of the first of the tests referred to in this certificate;

(i) they have received no anabolic substances for fattening purposes;

(j) they have been obtained from a holding, or from:,
(name of market)

a market which is officially authorized, under conditions at least as severe as those of Annex 2 to Decision 91/189/EEC for the export of porcine animals for breeding or production to the European Community;

and were assembled at
(name of assembly point)

and until dispatched onto the territory of the European Community they did not come into contact with any cloven-hoofed animals other than bovine or porcine animals meeting the requirements of Decision 92/461/EEC and were not at any place other than a place situated at the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Sweden, there had been no incidence of foot-and-mouth disease, classical swine fever, African swine fever or swine vesicular disease during the previous 30 days;

(Delete reference to holding, market or assembly point as appropriate)

- (k) any transport vehicles or containers in which they were loaded conform to international standards for the transport of live animals, were previously cleansed and disinfected with an officially authorized disinfectant and so constructed that faeces, urine, litter or fodder could not flow or fall out of the vehicle during transportation.

ANNEX E

ENZOOTIC BOVINE LEUKOSIS-FREE HERDS AND REGIONS

1. A herd becomes established as enzootic bovine leukosis-free when:
 - (a) (i) there has been no evidence whatever of enzootic bovine leukosis in the herd for a period of at least two years;
and
(ii) it has been subjected with negative result to two herd tests for enzootic bovine leukosis at an interval of not less than four and not more than 12 months, each herd test consisting of one of the serological tests described in Annex I to Decision 91/189/EEC applied to all bovine animals in the herd over 24 months of age on the date of the test;
or
 - (b) the region in which it is situated becomes established as an enzootic bovine leukosis-free region, provided the status of the herd is not at the time suspended under the terms of paragraph 5.
2. A region becomes established as enzootic bovine leukosis-free when:
 - (a) at least 99,8 % of bovine herds have the status of enzootic bovine leukosis-free;
or
 - (b) (i) there has been no evidence whatever of enzootic bovine leukosis in the region for a period of at least three years;
and
(ii) all bovine herds in the region have been subjected to at least one herd test as described in paragraph 1;
and
(iii) at least 10 % of bovine herds in the region, selected on a random basis, have been subjected with negative result to at least two herd tests as described in paragraph 1.
3. A herd maintains its status as enzootic bovine leukosis-free as long as:
 - (a) there is no evidence whatever of enzootic bovine leukosis in the herd;
and
 - (b) all the bovine animals in the herd were born there or were introduced from herds of enzootic bovine leukosis-free status;
and
 - (c) within three years of the date of its establishment as enzootic bovine leukosis-free, and at intervals of not more than three years thereafter, it is subjected with negative result to a herd test as described in paragraph 1.
4. A region maintains its status as enzootic bovine leukosis-free as long as:
 - (a) each year, a proportion of the herds in the region, selected on a random basis and sufficient in number to demonstrate, with a 99 % confidence rating, that not more than 0,2 % of herds are infected with enzootic bovine leukosis, have been subjected to a herd test as described in paragraph 1;
or
 - (b) each year, a proportion of the herds in the region, sufficient to contain at least 20 % of the bovine animals in the region over 24 months of age, have been subjected with negative result to a herd test as described in paragraph 1.
5. The enzootic bovine leukosis free status of a herd is suspended when:
 - (a) the conditions described in paragraph 3 cease to apply;
or
 - (b) one or more animals give a positive result to one of the serological tests described in Annex I to Decision 91/189/EEC.
6. The enzootic bovine leukosis-free status of a region is suspended when:
 - (a) the conditions described in paragraph 4 cease to apply;
or
 - (b) enzootic bovine leukosis is detected and confirmed in more than 0,2 % of bovine herds in the region.

7. The enzootic bovine leukosis-free status of a herd is re-established when:

- (a) any reactor animal and, if the reactor is a cow, its progeny in the herd have been removed under the supervision of the veterinary authorities for slaughter, except that the competent authority may grant a derogation from the requirement for the removal of the progeny of a reactor cow if it is satisfied that the animal(s) was/were separated from its/their dam immediately after birth;

and

- (b) (i) if the suspension results from a positive test on a single animal, the herd has been subjected with negative result and not less than three months after the withdrawal referred to in paragraph 7 (a) to a herd test as described in paragraph 1;

or

- (ii) if the suspension results from a positive test on more than one animal, the herd has been subjected to two herd tests as described in paragraph 1, the first being applied not less than three months after the withdrawal referred to in paragraph 7 (a) and the second not less than four or more than 12 months later, the tests to include any progeny of a reactor cow retained in the herd under the derogation referred to in paragraph 7 (a), regardless of their age at the time of test;

and

- (c) an epizootological enquiry has been conducted on all herds epizootologically linked to the infected herd.

8. The enzootic bovine leukosis-free status of a region is re-established when:

- (a) at least 99,8 % of bovine herds in the region have the status of enzootic bovine leukosis-free;

and

- (b) at least 20 % of bovine herds in the region have been subjected with negative result to two herd tests as described in paragraph 1, at an interval of not less than four and not more than 12 months.

ANNEX F

Mark to be applied to bovine animals in application of Article 1 (4) (b)

A permanent mark, having the dimensions indicated below, applied to and visible on at least two places on the hind-quarters of each animal using the technique known as 'freeze-branding'.

COMMISSION DECISION

of 2 September 1992

concerning animal health conditions and veterinary certificates for the import of domestic animals of the bovine and porcine species from Finland

(92/462/EEC)

THE COMMISSION OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Economic Community,

Having regard to Council Directive 72/462/EEC of 12 December 1972 on health and veterinary inspection problems upon the import of bovine, ovine and caprine animals and swine and fresh meat or meat products from third countries ⁽¹⁾, as last amended by Regulation (EEC) No 3763/91 ⁽²⁾, and in particular Article 8 and 11 thereof,

Whereas Member States shall import domestic animals of the bovine and porcine species in accordance with the provisions of Council Directive 91/496/EEC ⁽³⁾ which lays down the principles governing the organization of veterinary checks on animals entering the Community from third countries;

Whereas the geographical proximity of Finland to the Community has implications for trade in live animals;

Whereas following Community veterinary missions it appears that animal health in Finland is controlled by veterinary services which can offer satisfactory guarantees concerning diseases which might be transmitted through the import of domestic animals of the bovine or porcine species;

Whereas the responsible Finnish veterinary authorities have confirmed that Finland has during the last 24 months been free from foot-and-mouth disease and during the last 12 months been free from rinderpest, contagious bovine pleuro-pneumonia, vesicular stomatitis, bluetongue, classical swine fever, African swine fever, porcine enteroviral encephalomyelitis (Teschen disease), swine vesicular disease and vesicular exanthema and that no vaccinations have been carried out against any of those diseases during the past 12 months;

Whereas the responsible Finnish veterinary authorities have undertaken to notify the Commission and the Member States, by telex or telefax, within 24 hours, of the confirmation of the occurrence of any of the abovementioned diseases or of the adoption of vaccination against any of them or, within an appropriate period, of any proposed changes in the Finnish import rules concerning bovine animals or swine or the semen or embryos thereof;

Whereas bovine tuberculosis and brucellosis have been eradicated from Finland, vaccination against bovine brucellosis is not permitted and the measures taken by the responsible Finnish authorities to prevent a recrudescence of these diseases are sufficient to equate the status of Finnish herds, other than those under official restriction, with that of herds in the Community having the status of officially tuberculosis-free or officially brucellosis-free;

Whereas the responsible Finnish veterinary authorities have undertaken to supervise officially the issue of certificates arising from this Decision and to ensure that all relevant certificates, declarations and statements on which export certification may have been based remain on official file for at least 12 months following the dispatch of the animals to which they refer;

Whereas the responsible Finnish veterinary authorities have undertaken not to permit the issue of the certificates described in the Annexes to this Decision in respect of animals which have been imported into Finland unless such animals were imported in accordance with veterinary conditions at least as strict as the relevant requirements laid down in Directive 72/462/EEC, including any relevant subsidiary decisions;

Whereas the measures provided for in this Decision are in accordance with the opinion of the Standing Veterinary Committee,

HAS ADOPTED THIS DECISION:

Article 1

1. Without prejudice to paragraphs 2 and 4, Member States shall authorize the import from Finland of the following animals:

- (a) domestic animals of the bovine species for breeding or production which meet the requirements set out in the animal health certificate in Annex A to this Decision and are accompanied by such a certificate;
- (b) domestic animals of the bovine species for slaughter which meet the requirements set out in the animal health certificate in Annex B to this Decision and are accompanied by such a certificate;

⁽¹⁾ OJ No L 302, 31. 12. 1972, p. 28.

⁽²⁾ OJ No L 356, 24. 12. 1991, p. 1.

⁽³⁾ OJ No L 268, 24. 9. 1991, p. 56.

- (c) domestic animals of the porcine species for breeding or production which meet the requirements set out in the animal health certificate in Annex C to this Decision and are accompanied by such a certificate;
- (d) domestic animals of the porcine species for slaughter which meet the requirements set out in the animal health certificate in Annex D to this Decision and are accompanied by such a certificate.

2. Member States may only authorize the importation from Finland of the domestic animals of the bovine or porcine species indicated in paragraph 1 which have been imported into Finland if such animals were imported from the Community or from a third country included in the list set out in the Annex to Council Decision 79/542/EEC ⁽¹⁾ in so far as it covers domestic animals of these species and only if the import was effected in accordance with veterinary conditions at least as strict as the requirements of Chapter II of Directive 72/462/EEC, including any relevant subsidiary decisions.

3. Member States shall require that animals which are submitted to tests in application of this Decision are continuously isolated under conditions approved by an official Finnish veterinarian from all cloven-hoofed animals not forming part of a consignment intended for export to the Community or not of equivalent health status to such animals, from the time of the first test to the time of loading.

4. Member States may only permit the entry onto their territory from Finland of bovine animals if such animals:

- (a) come from herds declared by the Finnish veterinary authorities to be enzootic bovine leukosis-free as defined in Annex E to this Decision and have been subjected, within 30 days before export and with negative result, to an individual test for enzootic bovine leukosis carried out according to the Protocol in Annex I to Commission Decision 91/189/EEC ⁽²⁾;

or

- (b) are intended for meat production, are not more than 30 months of age, come from herds which are included in a national programme for the eradication of enzootic bovine leukosis and in which there has been no evidence whatever of that disease for at least two years and are permanently marked as described in Annex F to this Decision;

or

- (c) come from herds which are included in a national programme for the eradication of enzootic bovine leukosis, are consigned directly to a slaughterhouse and are slaughtered within three working days of their arrival there.

In the case of the animals referred to at (b) and (c), Member States shall ensure, by inspection, that such animals are clearly identified, shall supervise them until slaughter and shall take all measures necessary to prevent contamination of indigenous herds.

⁽¹⁾ OJ No L 146, 14. 6. 1979, p. 15.

⁽²⁾ OJ No L 96, 17. 4. 1991, p. 1.

5. Member States shall not authorize the import of domestic animals of the bovine or porcine species other than as indicated in this Article.

Article 2

Pending the entry into force of any measures adopted by the Community for the eradication, prevention or control of a contagious or infectious bovine or porcine disease other than rabies, tuberculosis, brucellosis, foot-and-mouth disease, anthrax, rinderpest, contagious bovine pleuropneumonia, enzootic bovine leukosis, porcine enteroviral encephalomyelitis (Teschin disease), classical swine fever, African swine fever or swine vesicular disease, Member States may apply in respect of animals imported from Hungary such additional health conditions as they apply to other animals within the framework of a national programme, submitted to and approved by the Commission, for the eradication, prevention or control of such disease.

As a temporary measure until 31 December 1992, Member States may apply this Article in respect of national programmes which have been submitted to but not yet approved by the Commission but in that case they must, without delay, provide the Commission and the other Member States with details of the relevant health conditions.

Article 3

1. Member States shall render the introduction into their territory of bovine or porcine animals from Finland subject to the provision of a guarantee that the animals to be imported have not been vaccinated against foot-and-mouth disease.

2. Member States shall render the introduction into their territory of pigs from Finland subject to the provision of a guarantee that have not been vaccinated against classical swine fever and, in the case of pigs intended for breeding or production, a guarantee that they have shown a negative result to a test for the antibody produced by the virus of classical swine fever.

Article 4

This Decision shall enter into force 30 days after its notification to the Member States.

Article 5

This Decision is addressed to the Member States.

Done at Brussels, 2 September 1992.

For the Commission

Ray MAC SHARRY

Member of the Commission

ANNEX A

ANIMAL HEALTH CERTIFICATE

for domestic animals of the bovine species for breeding and production intended for consignment to the European Economic Community

(This certificate must accompany the consignment. It covers only animals in the same category — breeding or production — transported in the same railway wagon, lorry, aircraft or ship and consigned to the same destination. It must be completed on the date of loading and all time limits referred to expire on that date.)

No:

Exporting country: Finland

Ministry:

Competent issuing authority:

Country of destination:

Reference:

(Optional)

Reference to accompanying animal welfare certificate:

I. Number of animals:

(In words)

II. Identification of animals:

Number of animals	Cow, bull, ox, heifer, calf	Breed	Age	Official and other marks or brands (give number and position)

III. Origin of animals:

Names and addresses of farms of origin:

.....

IV. Destination of animals:

The animals will be sent

from:

(Place of loading)

to:

(Place of destination)

by railway wagon/lorry/aircraft/ship:

(Indicate means of transport and registration marks, flight number or registered name, as appropriate)

Name and address of consignor:

.....

Name and address of consignee:

.....

V. Health information:

I, the undersigned official veterinarian, hereby certify:

1. that Finland has during the past 24 months been free from foot-and-mouth disease and during the past 12 months been free from rinderpest, contagious bovine pleuro-pneumonia, vesicular stomatitis and bluetongue, that no vaccinations have been carried out against any of these diseases, other than foot-and-mouth disease, during the past 12 months, that vaccination against foot-and-mouth disease has been prohibited since 15 November 1991 and that the importation of animals vaccinated against foot-and-mouth disease since that date is prohibited;
2. that the animals described in this certificate meet the following requirements:
 - (a) — they were born on the territory of Finland and have remained there since birth,
or
— they were imported, not less than six months ago, from a Member State of the European Community or from a third country included in the list annexed to Council Decision 70/542/EEC, in accordance with veterinary conditions at least as strict as the relevant requirements of Directive 72/462/EEC, including any subsidiary decisions;
(Delete unwanted reference)
 - (b) they have been examined this day and show no clinical signs of disease;
 - (c) they have not been vaccinated against foot-and-mouth disease;
 - (d) they come from herds which are not restricted under the Finnish tuberculosis eradication legislation,
— they have been subjected within the past 30 days and with negative result to an intradermal tuberculin test;
(Delete reference to test if certificate applies to animals under six weeks old)
 - (e) they come from herds which are not restricted under the Finnish brucellosis eradication legislation,
— they have been subjected within the past 30 days to a serum agglutination test which showed a brucella count of less than 30 international units of agglutination per ml,
— they have not been vaccinated against brucellosis;
(Delete reference to test if certificate applies to animals under 12 months old or to male castrates of any age)
 - (f) — they come from herds declared by the veterinary authorities of Finland to be enzootic bovine leukosis free as defined in Annex E to Decision 92/462/EEC and have been subjected, within the past 30 days and with negative result, to an individual test for enzootic bovine leukosis,
or
— they are intended for meat production, are not more than 30 months of age, come from herds which are included in a national programme for the eradication of enzootic bovine leukosis and in which there has been no evidence whatever of that disease during the past two years and are marked in the manner defined in Annex F to Decision 92/462/EEC;
(Delete according to the category of animal to which this certificate applies)
 - (g) they show no clinical sign of mastitis and the analysis (and second analysis, where relevant) of the milk carried out according to Annex D to Council Directive 64/432/EEC within the past 30 days showed no characteristic inflammatory condition, no specific pathogenic micro-organism or, in the case of a second analysis, the presence of an antibiotic;
(Delete section unless certificate applies to dairy cows)
 - (h) they are not animals which are to be destroyed under a national contagious or infectious disease eradication programme;
 - (i) they have remained during the past 30 days, or since birth if less than 30 days old, on a holding or holdings situated in the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Finland, during the past 30 days there has been no case of foot-and-mouth disease;
 - (j) they come from holdings on which there has been no evidence of:
— anthrax for the past 30 days,
— brucellosis for the past 12 months,

— tuberculosis for the past six months,

— rabies for the past six months;

- (k) they have been subjected with negative result to the following test(s) and conform to the following guarantees, as required, by a Member State in application of Article 2 of Decision 92/462/EEC

..... ;
(Complete or delete as required by importing Member State)

- (l) they have been continuously isolated under conditions approved by an official veterinarian from all cloven-hoofed animals not intended for export to the Community or not of equivalent health status to such animals since the time of application of the first of the tests referred to in this certificate;

(Delete if not applicable)

- (m) they have received no anabolic substances for fattening purposes;

- (n) they have been obtained from a holding, or from ,
(name of market)

a market which is officially authorized, under conditions at least as severe as those of Annex 2 to Decision 91/189/EEC for the export of bovine animals for breeding or production to the European Community;

and were assembled at ,
(name of assembly point)

and until dispatched onto the territory of the European Community they did not come into contact with any cloven-hoofed animals other than bovine or porcine animals meeting the requirements of Decision 92/462/EEC and were not at any place other than a place situated at the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Finland, there had been no incidence of foot-and-mouth disease during the previous 30 days.

(Delete reference to holding, market or assembly point as appropriate)

- (o) for the transport of live animals, were previously cleansed and disinfected with an officially authorized disinfectant and so constructed that faeces, urine, litter or fodder could not flow or fall out of the vehicle during transportation.

VI. All tests referred to in this certificate have, except where otherwise indicated, been carried out according to the Protocols set out in Annex I to Decision 91/189/EEC. All loading places through which the animals have passed conform to the standards set out in Annex II to the same Decision.

VII. This certificate is valid for 10 days from the date of loading.

ANNEX C

ANIMAL HEALTH CERTIFICATE

for domestic animals of the porcine species for breeding and production intended for consignment to the European Economic Community

(This certificate must accompany the consignment. It covers only animals in the same category (breeding/production) transported in the same railway wagon, lorry, aircraft or ship and consigned to the same destination. It must be completed on the date of loading and all time limits referred to expire on that date)

No:

Exporting country: Finland

Ministry:

Competent issuing authority:

Country of destination:

Reference:

(Optional)

Reference to accompanying animal welfare certificate:

I. Number of animals:

(In words)

II. Identification of animals:

Number of animals	Sex	Breed	Age	Official and other marks or brands (give number and position)

III. Origin of animals:

Name(s) and address(es) of farm(s) of origin:

.....

.....

IV. Destination of animals:

The animals will be sent

from:

(Place of loading)

to:

(Place of destination)

by railway wagon/lorry/aircraft/ship

(Indicate means of transport and registration marks, flight number or registered name, as appropriate)

Name and address of consignor:

.....

Name and address of consignee:

.....

V. Health information:

I, the undersigned official veterinarian, hereby certify:

1. that Finland has during the past 24 months been free from foot-and-mouth disease and during the past 12 months been free from vesicular stomatitis, classical swine fever, African swine fever, porcine enteroviral encephalomyelitis (Teschen disease), swine vesicular disease and vesicular exanthema, that no vaccinations have been carried out against any of these diseases, other than foot-and-mouth disease, during the past 12 months and that the importation of animals vaccinated against foot-and-mouth disease and classical swine fever is prohibited;

2. that the animals described in this certificate meet the following requirements:

- (a) — they were born on the territory of Finland and have remained there since birth,

or

- they were imported, not less than six months ago, from a Member State of the European Community or from a third country included in the list annexed to Decision 79/542/EEC, in accordance with veterinary conditions at least as strict as the relevant requirements of Directive 72/462/EEC, including any subsidiary decisions;

(Delete unwanted reference)

- (b) they have been examined this day and show no clinical signs of disease;

- (c) they have not been vaccinated against foot-and-mouth disease or against classical swine fever,

- they have been subjected within the past 30 days and with negative result in both cases to a test for classical swine fever antibodies and a test for swine vesicular disease antibodies;

- (d) they come from swine herds which are not restricted under the Finnish brucellosis eradication legislation,

- they have been subjected within the past 30 days to a serum agglutination test which showed a brucella count of less than 30 international units of agglutination and with negative result to a complement-fixation test for brucellosis;

(Delete reference to tests if certificate applies to animals under four months of age)

- (e) they are not animals which are to be destroyed under a national contagious or infectious disease eradication programme;

- (f) they have remained during the past 30 days, or since birth if less than 30 days old, on a holding or holdings situated in the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Finland, during the past 30 days there has been no case of foot-and-mouth disease, classical swine fever, African swine fever or swine vesicular disease;

- (g) they come from holdings on which there has been no evidence of:

- anthrax for the past 30 days,

- rabies for the past six months;

- (h) they have been subjected, with negative result, to the following test(s) and conform to the following guarantees, as required by a Member State in application of Article 2 of Decision 92/462/EEC:

.....;
(Complete or delete as required by importing Member State)

- (i) they have been continuously isolated under conditions approved by an official veterinarian from all cloven-hoofed animals not intended for export to the Community or not of equivalent health status to such animals since the time of application of the first of the tests referred to in this certificate;

- (j) they have received no anabolic substances for fattening purposes;

- (k) they have been obtained from a holding, or from,

(name of market)

a market which is officially authorized, under conditions as least as severe as those of Annex 2 to Decision 91/189/EEC for the export of porcine animals for breeding or production to the European Community;

and were assembled at
(name of assembly point)

and until dispatched onto the territory of the European Community they did not come into contact with any cloven-hoofed animals other than bovine or porcine animals meeting the requirements of Decision 92/462/EEC and were not at any place other than a place situated at the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Finland, there had been no incidence of foot-and-mouth disease, classical swine fever, African swine fever or swine vesicular disease during the previous 30 days;

(Delete reference to holding, market or assembly point as appropriate)

- (l) any transport vehicles or containers in which they were loaded conform to international standards for the transport of live animals, were previously cleansed and disinfected with an officially authorized disinfectant and so constructed that faeces, urine, litter or fodder could not flow or fall out of the vehicle during transportation.

VI. All tests referred to in this certificate have been carried out according to the Protocols set out in Annex I to Decision 91/189/EEC. All loading places through which the animals have passed conform to the standards set out in Annex II to the same Decision.

VII. This certificate is valid for 10 days from the date of loading.

ANNEX E

ENZOOTIC BOVINE LEUKOSIS-FREE HERDS AND REGIONS

1. A herd becomes established as enzootic bovine leukosis-free when:
 - (a) (i) there has been no evidence whatever of enzootic bovine leukosis in the herd for a period of at least two years;
and
 - (ii) it has been subjected with negative result to two herd tests for enzootic bovine leukosis at an interval of not less than four and not more than 12 months, each herd test consisting of one of the serological tests described in Annex I to Decision 91/189/EEC applied to all bovine animals in the herd over 24 months of age on the date of the test;or
 - (b) the region in which it is situated becomes established as an enzootic bovine leukosis-free region, provided the status of the herd is not at the time suspended under the terms of paragraph 5.
2. A region becomes established as enzootic bovine leukosis-free when:
 - (a) at least 99,8 % of bovine herds have the status of enzootic bovine leukosis-free;or
 - (b) (i) there has been no evidence whatever of enzootic bovine leukosis in the region for a period of at least three years;
and
 - (ii) all bovine herds in the region have been subjected to at least one herd test as described in paragraph 1;
and
 - (iii) at least 10 % of bovine herds in the region, selected on a random basis, have been subjected with negative result to at least two herd tests as described in paragraph 1.
3. A herd maintains its status as enzootic bovine leukosis-free as long as:
 - (a) there is no evidence whatever of enzootic bovine leukosis in the herd;
and
 - (b) all the bovine animals in the herd were born there or were introduced from herds of enzootic bovine leukosis-free status;
and
 - (c) within three years of the date of its establishment as enzootic bovine leukosis-free, and at intervals of not more than three years thereafter, it is subjected with negative result to a herd test as described in paragraph 1.
4. A region maintains its status as enzootic bovine leukosis-free as long as:
 - (a) each year, a proportion of the herds in the region, selected on a random basis and sufficient in number to demonstrate, with a 99 % confidence rating, that not more than 0,2 % of herds are infected with enzootic bovine leukosis, have been subjected to a herd test as described in paragraph 1;or
 - (b) each year, a proportion of the herds in the region, sufficient to contain at least 20 % of the bovine animals in the region over 24 months of age, have been subjected with negative result to a herd test as described in paragraph 1.
5. The enzootic bovine leukosis free status of a herd is suspended when:
 - (a) the conditions described in paragraph 3 cease to apply;or
 - (b) one or more animals give a positive result to one of the serological tests described in Annex I to Decision 91/189/EEC.
6. The enzootic bovine leukosis-free status of a region is suspended when:
 - (a) the conditions described in paragraph 4 cease to apply;or
 - (b) enzootic bovine leukosis is detected and confirmed in more than 0,2 % of bovine herds in the region.

7. The enzootic bovine leukosis-free status of a herd is re-established when:
- (a) any reactor animal and, if the reactor is a cow, its progeny in the herd have been removed under the supervision of the veterinary authorities for slaughter, except that the competent authority may grant a derogation from the requirement for the removal of the progeny of a reactor cow if it is satisfied that the animal(s) was/were separated from its/their dam immediately after birth;
and
 - (b) (i) if the suspension results from a positive test on a single animal, the herd has been subjected with negative result and not less than three months after the withdrawal referred to in paragraph 7 (a) to a herd test as described in paragraph 1;
or
(ii) if the suspension results from a positive test on more than one animal, the herd has been subjected to two herd tests as described in paragraph 1, the first being applied not less than three months after the withdrawal referred to in paragraph 7 (a) and the second not less than four or more than 12 months later, the tests to include any progeny of a reactor cow retained in the herd under the derogation referred to in paragraph 7 (a), regardless of their age at the time of test;
and
 - (c) an epizootological enquiry has been conducted on all herds epizootologically linked to the infected herd.
8. The enzootic bovine leukosis-free status of a region is re-established when:
- (a) at least 99,8 % of bovine herds in the region have the status of enzootic bovine leukosis-free;
and
 - (b) at least 20 % of bovine herds in the region have been subjected with negative result to two herd tests as described in paragraph 1, at an interval of not less than four and not more than 12 months.

ANNEX F

Mark to be applied to bovine animals in application of Article 1 (4) (b)

A permanent mark, having the dimensions indicated below, applied to and visible on at least two places on the hind-quarters of each animal using the technique known as 'freeze-branding'.

COMMISSION DECISION

of 2 September 1992

concerning animal health conditions and veterinary certificates for the import of domestic animals of the bovine and porcine species from Iceland

(92/463/EEC)

THE COMMISSION OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Economic Community,

Having regard to Council Directive 72/462/EEC of 12 December 1972 on health and veterinary inspection problems upon the import of bovine, ovine and caprine animals and swine and fresh meat or meat products from third countries ⁽¹⁾, as last amended by Regulation (EEC) No 3763/91 ⁽²⁾, and in particular Article 8 and 11 thereof,

Whereas Member States shall import domestic animals of the bovine and porcine species in accordance with the provisions of Council Directive 91/496/EEC ⁽³⁾ which lays down the principles governing the organization of veterinary checks on animals entering the Community from third countries;

Whereas the geographical proximity of Iceland to the Community has implications for trade in live animals;

Whereas following Community veterinary missions it appears that animal health in Iceland is controlled by veterinary services which can offer satisfactory guarantees concerning diseases which might be transmitted through the import of domestic animals of the bovine or porcine species;

Whereas the responsible Icelandic veterinary authorities have confirmed that Iceland has during the last 24 months been free from foot-and-mouth disease and during the last 12 months been free from rinderpest, contagious bovine pleuro-pneumonia, vesicular stomatitis, bluetongue, classical swine fever, African swine fever, porcine enteroviral encephalomyelitis (Teschén disease), swine vesicular disease and vesicular exanthema and that no vaccinations have been carried out against any of those diseases during the past 12 months;

Whereas the responsible Icelandic veterinary authorities have undertaken to notify the Commission and the Member States, by telex or telefax, within 24 hours, of the confirmation of the occurrence of any of the abovementioned diseases or of the adoption of vaccination against any of them or, within an appropriate period, of any proposed changes in the Icelandic import rules concerning bovine animals or swine or the semen or embryos thereof;

Whereas bovine tuberculosis and brucellosis have been eradicated from Iceland, vaccination against bovine brucellosis is not permitted and the measures taken by the responsible Icelandic authorities to prevent a recrudescence of these diseases are sufficient to equate the status of Icelandic herds, other than those under official restriction, with that of herds in the Community having the status of officially tuberculosis-free or officially brucellosis-free;

Whereas the responsible Icelandic veterinary authorities have undertaken to supervise officially the issue of certificates arising from this Decision and to ensure that all relevant certificates, declarations and statements on which export certification may have been based remain on official file for at least 12 months following the dispatch of the animals to which they refer;

Whereas the responsible Icelandic veterinary authorities have undertaken not to permit the issue of the certificates described in the Annexes to this Decision in respect of animals which have been imported into Iceland unless such animals were imported in accordance with veterinary conditions at least as strict as the relevant requirements laid down in Directive 72/462/EEC, including any relevant subsidiary decisions;

Whereas the measures provided for in this Decision are in accordance with the opinion of the Standing Veterinary Committee,

HAS ADOPTED THIS DECISION:

Article 1

1. Without prejudice to paragraphs 2 and 4, Member States shall authorize the import from Iceland of the following animals:

- (a) domestic animals of the bovine species for breeding or production which meet the requirements set out in the animal health certificate in Annex A to this Decision and are accompanied by such a certificate;
- (b) domestic animals of the bovine species for slaughter which meet the requirements set out in the animal health certificate in Annex B to this Decision and are accompanied by such a certificate;

⁽¹⁾ OJ No L 302, 31. 12. 1972, p. 28.

⁽²⁾ OJ No L 356, 24. 12. 1991, p. 1.

⁽³⁾ OJ No L 268, 24. 9. 1991, p. 56.

- (c) domestic animals of the porcine species for breeding or production which meet the requirements set out in the animal health certificate in Annex C to this Decision and are accompanied by such a certificate;
- (d) domestic animals of the porcine species for slaughter which meet the requirements set out in the animal health certificate in Annex D to this Decision and are accompanied by such a certificate.

2. Member States may only authorize the importation from Iceland of the domestic animals of the bovine or porcine species indicated in paragraph 1 which have been imported into Iceland if such animals were imported from the Community or from a third country included in the list set out in the Annex to Council Decision 79/542/EEC ⁽¹⁾ in so far as it covers domestic animals of these species and only if the import was effected in accordance with veterinary conditions at least as strict as the requirements of Chapter II of Directive 72/462/EEC, including any relevant subsidiary decisions.

3. Member States shall require that animals which are submitted to tests in application of this Decision are continuously isolated under conditions approved by an official Icelandic veterinarian from all cloven-hoofed animals not forming part of a consignment intended for export to the Community or not of equivalent health status to such animals, from the time of the first test to the time of loading.

4. Member States may only permit the entry onto their territory from Iceland of bovine animals if such animals:

- (a) come from herds declared by the Icelandic veterinary authorities to be enzootic bovine leukosis-free as defined in Annex E to this Decision and have been subjected, within 30 days before export and with negative result, to an individual test for enzootic bovine leukosis carried out according to the Protocol in Annex I to Commission Decision 91/189/EEC ⁽²⁾;

or

- (b) are intended for meat production, are not more than 30 months of age, come from herds which are included in a national programme for the eradication of enzootic bovine leukosis and in which there has been no evidence whatever of that disease for at least two years and are permanently marked as described in Annex F to this Decision;

or

- (c) come from herds which are included in a national programme for the eradication of enzootic bovine leukosis, are consigned directly to a slaughterhouse and are slaughtered within three working days of their arrival there.

In the case of the animals referred to at (b) and (c), Member States shall ensure, by inspection, that such animals are clearly identified, shall supervise them until slaughter and shall take all measures necessary to prevent contamination of indigenous herds.

5. Member States shall not authorize the import of domestic animals of the bovine or porcine species other than as indicated in this Article.

Article 2

Pending the entry into force of any measures adopted by the Community for the eradication, prevention or control of a contagious or infectious bovine or porcine disease other than rabies, tuberculosis, brucellosis, foot-and-mouth disease, anthrax, rinderpest, contagious bovine pleuropneumonia, enzootic bovine leukosis, porcine enteroviral encephalomyelitis (Teschen disease), classical swine fever, African swine fever or swine vesicular disease, Member States may apply in respect of animals imported from Iceland such additional health conditions as they apply to other animals within the framework of a national programme, submitted to and approved by the Commission, for the eradication, prevention or control of such disease.

As a temporary measure until 31 December 1992, Member States may apply this Article in respect of national programmes which have been submitted to but not yet approved by the Commission but in that case they must, without delay, provide the Commission and the other Member States with details of the relevant health conditions.

Article 3

1. Member States shall render the introduction into their territory of bovine or porcine animals from Iceland subject to the provision of a guarantee that the animals to be imported have not been vaccinated against foot-and-mouth disease.

2. Member States shall render the introduction into their territory of pigs from Iceland subject to the provision of a guarantee that have not been vaccinated against classical swine fever and, in the case of pigs intended for breeding or production, a guarantee that they have shown a negative result to a test for the antibody produced by the virus of classical swine fever.

Article 4

This Decision shall enter into force 30 days after its notification to the Member States.

Article 5

This Decision is addressed to the Member States.

Done at Brussels, 2 September 1992.

For the Commission

Ray MAC SHARRY

Member of the Commission

Name and address of consignee:

.....

V. Health information:

I, the undersigned official veterinarian, hereby certify:

1. that Iceland has during the past 24 months been free from foot-and-mouth disease and during the past 12 months been free from rinderpest, contagious bovine pleuro-pneumonia, vesicular stomatitis and bluetongue, that no vaccinations have been carried out against any of these diseases, other than foot-and-mouth disease, during the past 12 months, that vaccination against foot-and-mouth disease has been prohibited since 15 November 1991 and that the importation of animals vaccinated against foot-and-mouth disease since that date is prohibited;
2. that the animals described in this certificate meet the following requirements:
 - (a) — they were born on the territory of Iceland and have remained there since birth,
or
— they were imported, not less than six months ago, from a Member State of the European Community or from a third country included in the list annexed to Council Decision 70/542/EEC, in accordance with veterinary conditions at least as strict as the relevant requirements of Directive 72/462/EEC, including any subsidiary decisions;
(Delete unwanted reference)
 - (b) they have been examined this day and show no clinical signs of disease;
 - (c) they have not been vaccinated against foot-and-mouth disease;
 - (d) they come from herds which are not restricted under the Icelandic tuberculosis eradication legislation,
— they have been subjected within the past 30 days and with negative result to an intradermal tuberculin test;
(Delete reference to test if certificate applies to animals under six weeks old)
 - (e) they come from herds which are not restricted under the Icelandic brucellosis eradication legislation,
— they have been subjected within the past 30 days to a serum agglutination test which showed a brucella count of less than 30 international units of agglutination per ml,
— they have not been vaccinated against brucellosis;
(Delete reference to test if certificate applies to animals under 12 months old or to male castrates of any age)
 - (f) — they come from herds declared by the veterinary authorities of Iceland to be enzootic bovine leukosis free as defined in Annex E to Decision 92/463/EEC and have been subjected, within the past 30 days and with negative result, to an individual test for enzootic bovine leukosis,
or
— they are intended for meat production, are not more than 30 months of age, come from herds which are included in a national programme for the eradication of enzootic bovine leukosis and in which there has been no evidence whatever of that disease during the past two years and are marked in the manner defined in Annex F to Decision 92/463/EEC;
(Delete according to the category of animal to which this certificate applies)
 - (g) they show no clinical sign of mastitis and the analysis (and second analysis, where relevant) of the milk carried out according to Annex D to Council Directive 64/432/EEC within the past 30 days showed no characteristic inflammatory condition, no specific pathogenic micro-organism or, in the case of a second analysis, the presence of an antibiotic;
(Delete section unless certificate applies to dairy cows)
 - (h) they are not animals which are to be destroyed under a national contagious or infectious disease eradication programme;
 - (i) they have remained during the past 30 days, or since birth if less than 30 days old, on a holding or holdings situated in the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Iceland, during the past 30 days there has been no case of foot-and-mouth disease;
 - (j) they come from holdings on which there has been no evidence of:
— anthrax for the past 30 days,
— brucellosis for the past 12 months,

— tuberculosis for the past six months,

— rabies for the past six months;

- (k) they have been subjected with negative result to the following test(s) and conform to the following guarantees, as required by a Member State in application of Article 2 of Decision 92/463/EEC

..... ;
(Complete or delete as required by importing Member State)

- (l) they have been continuously isolated under conditions approved by an official veterinarian from all cloven-hoofed animals not intended for export to the Community or not of equivalent health status to such animals since the time of application of the first of the tests referred to in this certificate;

(Delete if not applicable)

- (m) they have received no anabolic substances for fattening purposes;

- (n) they have been obtained from a holding, or from,
(name of market)

a market which is officially authorized, under conditions at least as severe as those of Annex 2 to Decision 91/189/EEC for the export of bovine animals for breeding or production to the European Community;

and were assembled at,
(name of assembly point)

and until dispatched onto the territory of the European Community they did not come into contact with any cloven-hoofed animals other than bovine or porcine animals meeting the requirements of Decision 92/463/EEC and were not at any place other than a place situated at the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Iceland, there had been no incidence of foot-and-mouth disease during the previous 30 days.

(Delete reference to holding, market or assembly point as appropriate)

- (o) for the transport of live animals, were previously cleansed and disinfected with an officially authorized disinfectant and so constructed that faeces, urine, litter or fodder could not flow or fall out of the vehicle during transportation.

VI. All tests referred to in this certificate have, except where otherwise indicated, been carried out according to the Protocols set out in Annex I to Decision 91/189/EEC. All loading places through which the animals have passed conform to the standards set out in Annex II to the same Decision.

VII. This certificate is valid for 10 days from the date of loading.

Done at, on

V. Health information:

I, the undersigned official veterinarian, hereby certify:

1. that Iceland has during the past 24 months been free from foot-and-mouth disease and during the past 12 months been free from rinderpest, contagious bovine pleuro-pneumonia, vesicular stomatitis and bluetongue, that no vaccinations have been carried out against any of these diseases, other than food-and-mouth disease, during the past 12 months and that the importation of animals vaccinated against foot-and-mouth disease since that date is prohibited;
2. that the animals described in this certificate meet the following requirements:

- (a) — they were born on the territory of Iceland and have remained there since birth,
or

- they were imported, not less than three months ago, from a Member State of the European Community or from a third country included in the list annexed to Decision 79/452/EEC, in accordance with veterinary conditions at least as strict as the relevant requirements of Directive 72/462/EEC, including any subsidiary decisions;

(Delete unwanted reference)

- (b) they have been examined this day and show no clinical signs of disease;

- (c) they have not been vaccinated against foot-and-mouth disease,

- (d) they come from herds which are not restricted under the Icelandic tuberculosis eradication legislation,

- they have been subjected within the past 30 days and with negative result to an intradermal tuberculin test;

(Delete reference to the test if certificate applies to animals under six weeks old)

- (e) they come from herds which are not restricted under the Icelandic brucellosis eradication legislation,

- they have not been vaccinated against brucellosis;

- (f) they come from herds included in a national programme for the eradication of enzootic bovine leukosis;

- (g) they are not animals which are to be destroyed under a national contagious or infectious disease eradication programme;

- (h) they have remained during the past 30 days, or since birth if less than 30 days old, on a holding or holdings situated in the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Iceland, during the past 30 days there has been no case of foot-and-mouth disease;

- (i) they come from holdings on which there has been no evidence of anthrax for the past 30 days;

- (j) they have been subjected with negative result to the following test(s) and conform to the following guarantees, as required by a Member State in application of Article 2 of Decision 92/463/EEC

..... ;

(Complete or delete as required by importing Member State)

- (k) they have been continuously isolated under conditions approved by an official veterinarian from all cloven-hoofed animals not intended for export to the Community or not of equivalent health status to such animals since the time of application of the first of the tests referred to in this certificate;

- (l) they have received no anabolic substances for fattening purposes;

- (m) they have been obtained from a holding, or from,

(name of market)

a market which is officially authorized, under conditions at least as severe as those of Annex 2 to Decision 91/189/EEC for the export of bovine animals for breeding or production to the European Community;

and were assembled at

(Name of assembly point)

and until dispatched onto the territory of the European Community they did not come into contact with any cloven-hoofed animals other than bovine or porcine animals meeting the requirements of Decision 92/463/EEC and were not at any place other than a place situated at the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Iceland, there had been no incidence of foot-and-mouth disease during the previous 30 days;

(Delete reference to holding, market or assembly point as appropriate)

- (n) any transport vehicles or containers in which they were loaded conform to international standards for the transport of live animals, were previously cleansed and disinfected with an officially authorized disinfectant and so constructed that faeces, urine, litter or fodder could not flow or fall out of the vehicle during transportation.

VI. All test referred to in this certificate have been carried out according to the Protocols set out in Annex I to Decision 91/189/EEC. All loading places through which the animals have passed conform to the standards set out in Annex II to the same Decision.

VII. This certificate is valid for 10 days from the date of loading.

ANNEX C

ANIMAL HEALTH CERTIFICATE

for domestic animals of the porcine species for breeding and production intended for consignment to the European Economic Community

(This certificate must accompany the consignment. It covers only animals in the same category (breeding/production) transported in the same railway wagon, lorry, aircraft or ship and consigned to the same destination. It must be completed on the date of loading and all time limits referred to expire on that date)

V. Health information:

I, the undersigned official veterinarian, hereby certify:

1. that Iceland has during the past 24 months been free from foot-and-mouth disease and during the past 12 months been free from vesicular stomatitis, classical swine fever, African swine fever, porcine enteroviral encephalomyelitis (Teschén disease), swine vesicular disease and vesicular exanthema, that no vaccinations have been carried out against any of these diseases, other than foot-and-mouth disease, during the past 12 months and that the importation of animals vaccinated against foot-and-mouth disease and classical swine fever is prohibited;

2. that the animals described in this certificate meet the following requirements:

(a) — they were born on the territory of Iceland and have remained there since birth,

or

— they were imported, not less than six months ago, from a Member State of the European Community or from a third country included in the list annexed to Decision 79/542/EEC, in accordance with veterinary conditions at least as strict as the relevant requirements of Directive 72/462/EEC, including any subsidiary decisions;

(Delete unwanted reference)

(b) they have been examined this day and show no clinical signs of disease;

(c) they have not been vaccinated against foot-and-mouth disease or against classical swine fever,

— they have been subjected within the past 30 days and with negative result in both cases to a test for classical swine fever antibodies and a test for swine vesicular disease antibodies;

(d) they come from swine herds which are not restricted under the Icelandic brucellosis eradication legislation,

— they have been subjected within the past 30 days to a serum agglutination test which showed a brucella count of less than 30 international units of agglutination and with negative result to a complement-fixation test for brucellosis;

(Delete reference to tests if certificate applies to animals under four months of age)

(e) they are not animals which are to be destroyed under a national contagious or infectious disease eradication programme;

(f) they have remained during the past 30 days, or since birth if less than 30 days old, on a holding or holdings situated in the centre of a circle 20 km in diameter in which, according to official findings by the veterinary authorities of Iceland, during the past 30 days there has been no case of foot-and-mouth disease, classical swine fever, African swine fever or swine vesicular disease;

(g) they come from holdings on which there has been no evidence of:

— anthrax for the past 30 days,

— rabies for the past six months;

(h) they have been subjected, with negative result, to the following test(s) and conform to the following guarantees, as required by a Member State in application of Article 2 of Decision 92/463/EEC:

..... ;
(Complete or delete as required by importing Member State)

(i) they have been continuously isolated under conditions approved by an official veterinarian from all cloven-hoofed animals not intended for export to the Community or not of equivalent health status to such animals since the time of application of the first of the tests referred to in this certificate;

(j) they have received no anabolic substances for fattening purposes;

(k) they have been obtained from a holding, or from,

ANNEX E

ENZOOTIC BOVINE LEUKOSIS-FREE HERDS AND REGIONS

1. A herd becomes established as enzootic bovine leukosis-free when:
 - (a) (i) there has been no evidence whatever of enzootic bovine leukosis in the herd for a period of at least two years;
and
(ii) it has been subjected with negative result to two herd tests for enzootic bovine leukosis at an interval of not less than four and not more than 12 months, each herd test consisting of one of the serological tests described in Annex I to Decision 91/189/EEC applied to all bovine animals in the herd over 24 months of age on the date of the test;
or
 - (b) the region in which it is situated becomes established as an enzootic bovine leukosis-free region, provided the status of the herd is not at the time suspended under the terms of paragraph 5.
2. A region becomes established as enzootic bovine leukosis-free when:
 - (a) at least 99,8 % of bovine herds have the status of enzootic bovine leukosis-free;
or
 - (b) (i) there has been no evidence whatever of enzootic bovine leukosis in the region for a period of at least three years;
and
(ii) all bovine herds in the region have been subjected to at least one herd test as described in paragraph 1;
and
(iii) at least 10 % of bovine herds in the region, selected on a random basis, have been subjected with negative result to at least two herd tests as described in paragraph 1.
3. A herd maintains its status as enzootic bovine leukosis-free as long as:
 - (a) there is no evidence whatever of enzootic bovine leukosis in the herd;
and
 - (b) all the bovine animals in the herd were born there or were introduced from herds of enzootic bovine leukosis-free status;
and
 - (c) within three years of the date of its establishment as enzootic bovine leukosis-free, and at intervals of not more than three years thereafter, it is subjected with negative result to a herd test as described in paragraph 1.
4. A region maintains its status as enzootic bovine leukosis-free as long as:
 - (a) each year, a proportion of the herds in the region, selected on a random basis and sufficient in number to demonstrate, with a 99 % confidence rating, that not more than 0,2 % of herds are infected with enzootic bovine leukosis, have been subjected to a herd test as described in paragraph 1;
or
 - (b) each year, a proportion of the herds in the region, sufficient to contain at least 20 % of the bovine animals in the region over 24 months of age, have been subjected with negative result to a herd test as described in paragraph 1.
5. The enzootic bovine leukosis free status of a herd is suspended when:
 - (a) the conditions described in paragraph 3 cease to apply;
or
 - (b) one or more animals give a positive result to one of the serological tests described in Annex I to Decision 91/189/EEC.
6. The enzootic bovine leukosis-free status of a region is suspended when:
 - (a) the conditions described in paragraph 4 cease to apply;
or
 - (b) enzootic bovine leukosis is detected and confirmed in more than 0,2 % of bovine herds in the region.

7. The enzootic bovine leukosis-free status of a herd is re-established when:

- (a) any reactor animal and, if the reactor is a cow, its progeny in the herd have been removed under the supervision of the veterinary authorities for slaughter, except that the competent authority may grant a derogation from the requirement for the removal of the progeny of a reactor cow if it is satisfied that the animal(s) was/were separated from its/their dam immediately after birth;

and

- (b) (i) if the suspension results from a positive test on a single animal, the herd has been subjected with negative result and not less than three months after the withdrawal referred to in paragraph 7 (a) to a herd test as described in paragraph 1;

or

- (ii) if the suspension results from a positive test on more than one animal, the herd has been subjected to two herd tests as described in paragraph 1, the first being applied not less than three months after the withdrawal referred to in paragraph 7 (a) and the second not less than four or more than 12 months later, the tests to include any progeny of a reactor cow retained in the herd under the derogation referred to in paragraph 7 (a), regardless of their age at the time of test;

and

- (c) an epizootological enquiry has been conducted on all herds epizootologically linked to the infected herd.

8. The enzootic bovine leukosis-free status of a region is re-established when:

- (a) at least 99,8 % of bovine herds in the region have the status of enzootic bovine leukosis-free;

and

- (b) at least 20 % of bovine herds in the region have been subjected with negative result to two herd tests as described in paragraph 1, at an interval of not less than four and not more than 12 months.

ANNEX F

Mark to be applied to bovine animals in application of Article 1 (4) (b)

A permanent mark, having the dimensions indicated below, applied to and visible on at least two places on the hind-quarters of each animal using the technique known as 'freeze-branding'.
